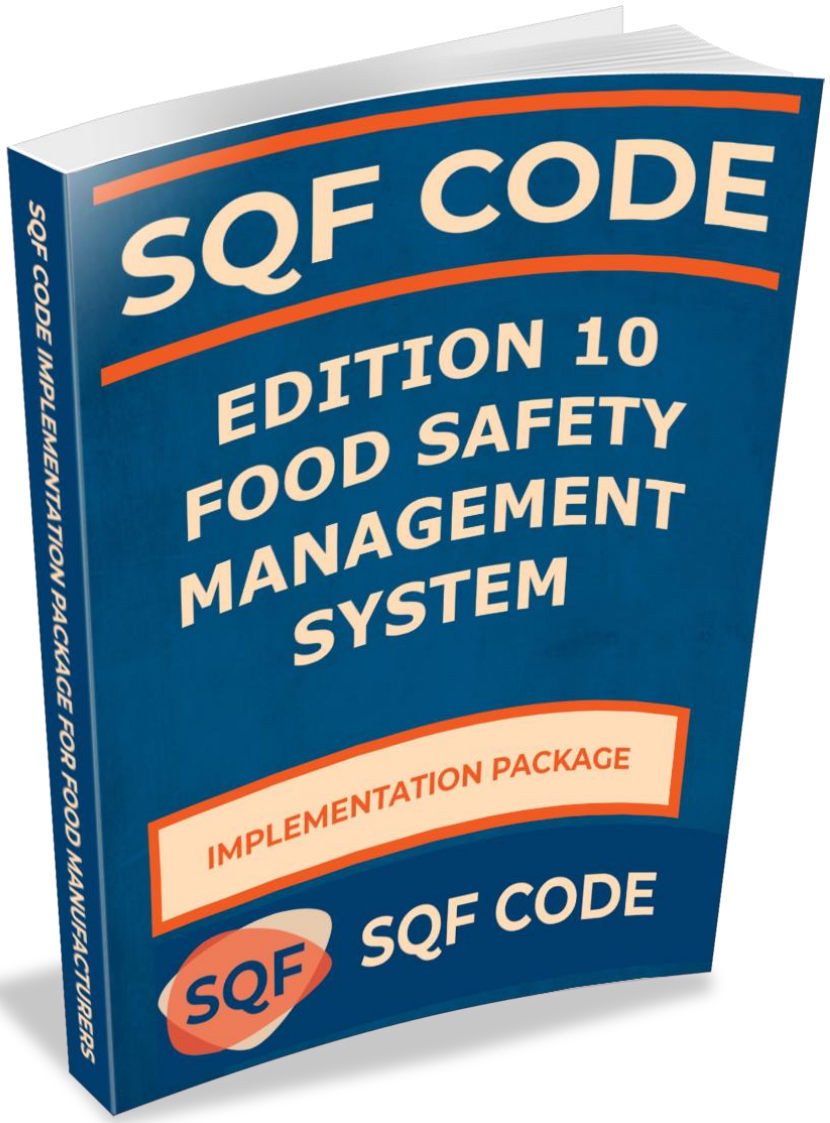
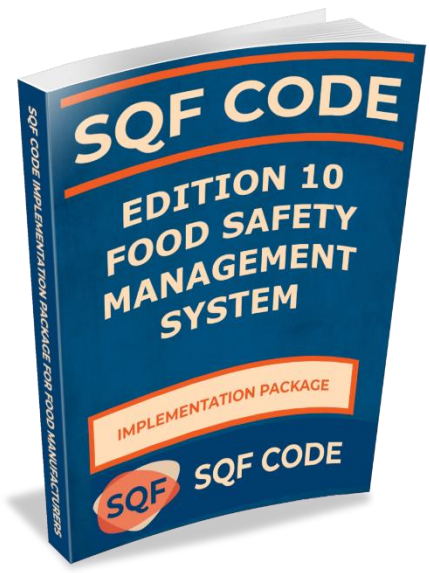
New 2026 Implementation Package Compliant with SQF Food Safety Code: Food Manufacturing Edition 10 and the latest CODEX HACCP Guidelines



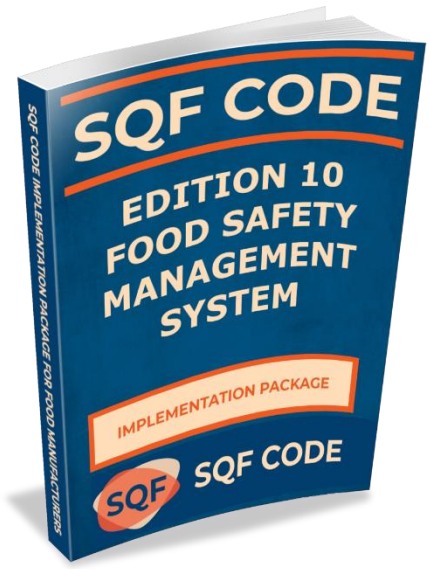
This is an ideal package for Food Manufacturers looking to achieve certification to the SQF Food Safety Code: Food Manufacturing Edition 10

The SQF Food Safety Management System Implementation Package includes a combination of comprehensive documentation, guidance, implementation tools and training.



Included in the SQF Food Safety Management System Implementation Package:

- ✓ Comprehensive Procedures Manual
- ✓ Supplementary HACCP Tools & Documents containing the HACCP Calculator
- ✓ Laboratory Quality Manual
- ✓ Training Modules
- ✓ FSQMS, Verification and Validation Record Templates
- ✓ Free online support via e-mail
- ✓ Allergen Management Module & Risk Assessment Tool
- ✓ Supplier Risk Assessment Tool
- ✓ Product Development Module
- ✓ Complaint Management Guidelines & Analyser
- ✓ Internal Audit Schedule Risk Assessment Tool and Template
- ✓ Food Fraud Risk Assessment Tool
- ✓ Food Defence Assessment Tool
- ✓ Implementation Workbook
- ✓ User guide



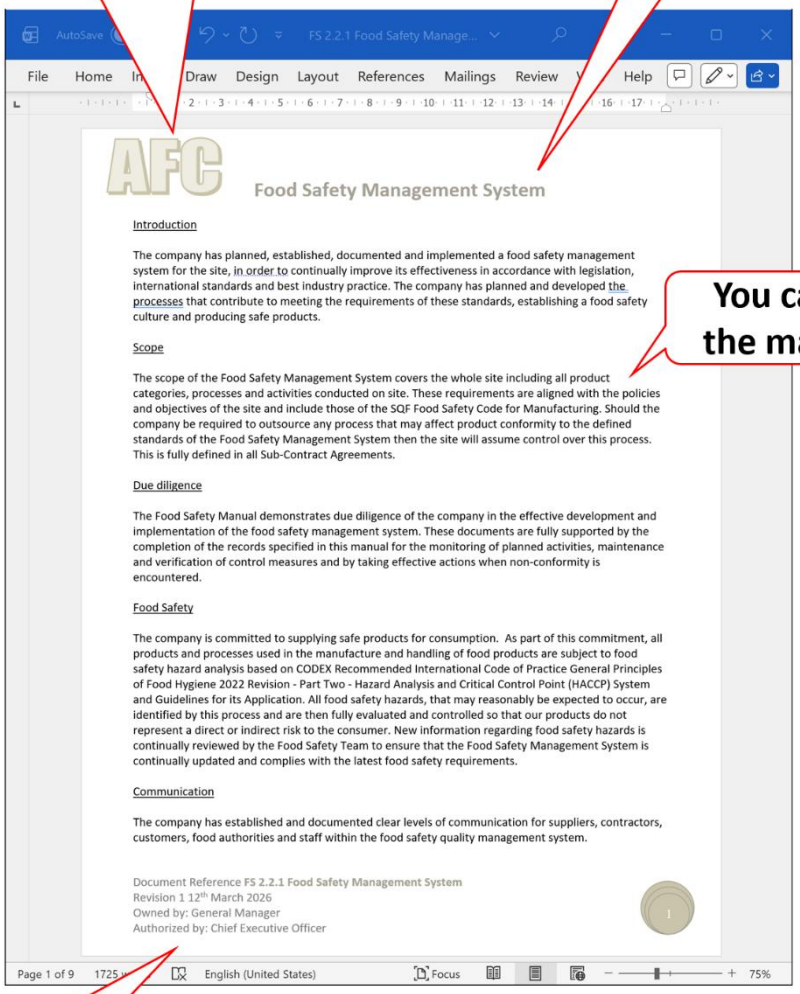
To order the SQF Edition 10 Food Safety Management System Implementation Package click here

Food Safety Management System & Prerequisite Programme Procedures

The main documents are provided in Microsoft Word format and are easily edited to suit your organisation.

For example put your company logo or name and address in the header

You can edit the header



You can edit the main text

You can edit the footer

The package contains a comprehensive set of editable Food Safety Management System & Prerequisite Procedures written in Microsoft Word (US English) format that match the clauses of the SQF Food Safety Code: Food Manufacturing Edition 10.

These are the procedure templates for Sections 2.1 Management Commitment 2.2 Document Control and Records 2.3 Specifications, Product Development, and Supplier Approval 2.4 Food Safety System

Management Commitment

Introduction

Senior management demonstrate clear and visible commitment to the food safety management system by establishing and implementing, then fully communicating and supporting its policies, procedures and objectives. Senior Management is committed to continually improve the effectiveness of the food safety management system by regular audit, review and proactive actions.

Scope

The scope of the food Safety Management System includes all products manufactured on site and activities conducted on site.

The scope is aligned with the policies and objectives of the site and includes the commitment to fully meet the requirements of the SQF Food Safety Code: Food Manufacturing, Edition 9.

Procedure

The Senior Management has a total commitment to food safety, observing all legal, moral and ethical codes and this is the concern of every employee.

Senior management demonstrate clear and visible commitment by:

- Establishing and implementing a Food Safety Policy.
- Communicating and Maintaining the Food Safety Policy.
- Establishing and implementing Food Safety Objectives.
- Communicating and Maintaining the Food Safety Objectives
- Leading and supporting a food safety culture within the site
- Conducting regular pro-active management reviews and communicating outputs.
- Communicating commitment to satisfying customer requirements including food safety, quality and service
- Supporting and planning the development and operation of the Food Safety Management systems.
- Ensuring the food safety management system is maintained when changes are planned and implemented.
- Establishing documentation required for the effective development, implementation and updating of the food safety management system and communicating pertinent information throughout the organization.
- Providing the human and financial resources, and training, to manage the Policies and Objectives effectively.
- Providing the infrastructure and work environment to manage the Policies and Objectives effectively.
- Promoting an ethic of continuous improvement throughout the company.

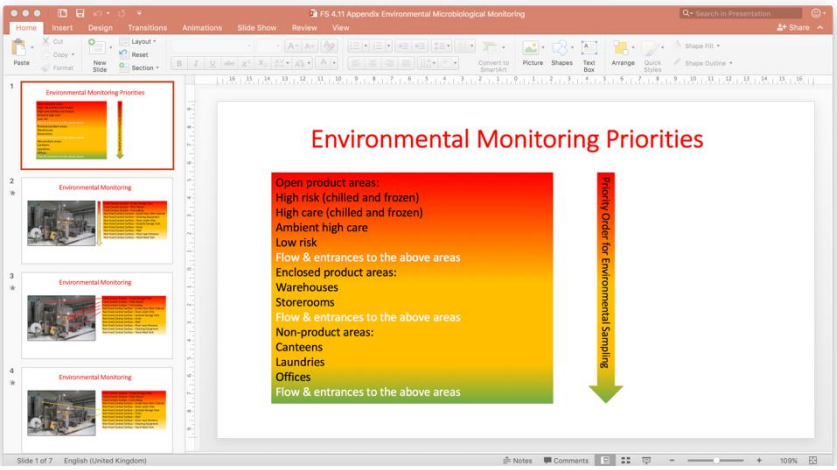
Expected Behaviors of all Personnel

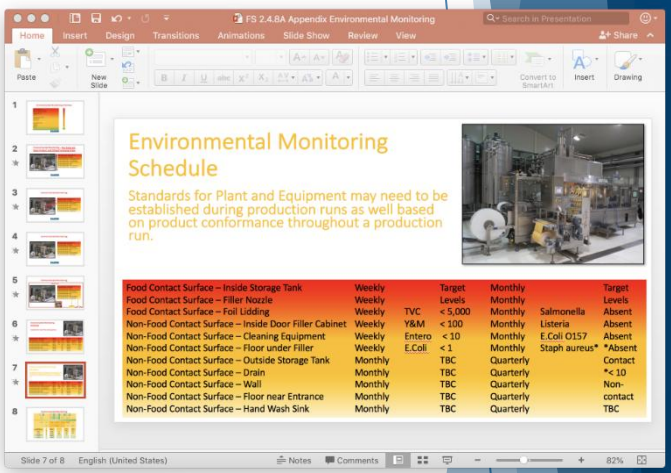
- ✓ Contribute to company objectives
- ✓ Compliance with company procedures
- ✓ Correctly completing documentation and records as required by your role within the organisation
- ✓ Adhere to Hygiene rules and comply with expected personnel standards
- ✓ Report non-conforming products or equipment
- ✓ Report any issues or areas of concern that may affect product safety, authenticity, legality or quality
- ✓ Report any problems with pests
- ✓ Ensure site security procedures are followed and unknown visitors are challenged
- ✓ Adopt a 'clean as you go' policy
- ✓ Contribute to hygiene and housekeeping standards
- ✓ Make suggestions for improvement



Environmental Monitoring Priorities

Open product areas:
High risk (chilled and frozen)
High care (chilled and frozen)
Ambient high care
Low risk
Flow & entrances to the above areas
Enclosed product areas:
Warehouses
Storerooms
Flow & entrances to the above areas
Non-product areas:
Canteens
Laundries
Offices
Flow & entrances to the above areas

Priority Order for Environmental Sampling



Environmental Monitoring Schedule

Standards for Plant and Equipment may need to be established during production runs as well based on product conformance throughout a production run.

Food Contact Surface – Inside Storage Tank	Weekly		Target Levels	Monthly		Target Levels
Food Contact Surface – Filler Nozzle	Weekly			Monthly		
Food Contact Surface – Foil Lidding	Weekly	TVC	< 5,000	Monthly	Salmonella	Absent
Non-Food Contact Surface – Inside Door Filler Cabinet	Weekly	Y&M	< 100	Monthly	Listeria	Absent
Non-Food Contact Surface – Cleaning Equipment	Weekly	Entero	< 10	Monthly	E.Coli O157	Absent

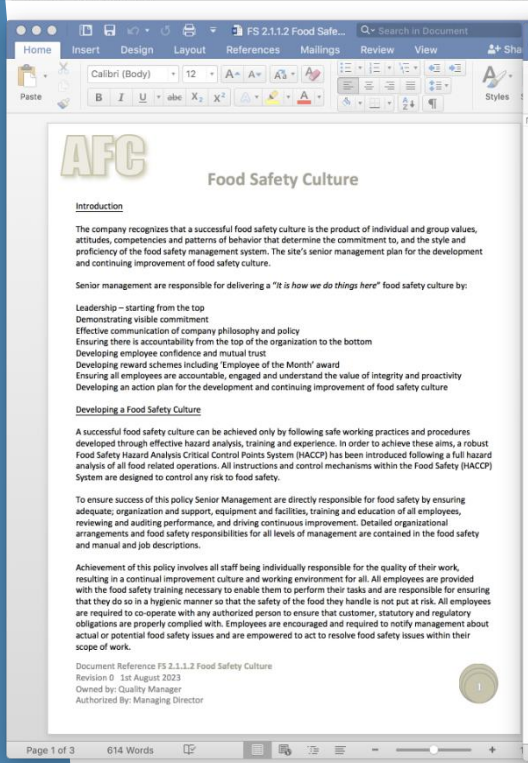
Non-Food Contact Surface – Floor near Entrance	Monthly		TBC	Quarterly		contact
Non-Food Contact Surface – Hand Wash Sink	Monthly		TBC	Quarterly		TBC



AFC

Food Safety Culture

Introduction

The company recognizes that a successful food safety culture is the product of individual and group values, attitudes, competencies and patterns of behavior that determine the commitment to, and the style and proficiency of the food safety management system. The site's senior management plan for the development and continuing improvement of food safety culture.

Senior management are responsible for delivering a *"It is how we do things here"* food safety culture by:

Leadership – starting from the top
Demonstrating visible commitment
Effective communication of company philosophy and policy
Ensuring there is accountability from the top of the organization to the bottom
Developing employee confidence and mutual trust
Developing reward schemes including 'Employee of the Month' award
Ensuring all employees are accountable, engaged and understand the value of integrity and proactivity
Developing an action plan for the development and continuing improvement of food safety culture

Developing a Food Safety Culture

A successful food safety culture can be achieved only by following safe working practices and procedures developed through effective hazard analysis, training and experience. In order to achieve these aims, a robust Food Safety Hazard Analysis Critical Control Points System (HACCP) has been introduced following a full hazard analysis of all food related operations. All instructions and control mechanisms within the Food Safety (HACCP) System are designed to control any risk to food safety.

To ensure success of this policy Senior Management are directly responsible for food safety by ensuring adequate; organization and support, equipment and facilities, training and education of all employees, reviewing and auditing performance, and driving continuous improvement. Detailed organizational arrangements and food safety responsibilities for all levels of management are contained in the food safety and manual and job descriptions.

Achievement of this policy involves all staff being individually responsible for the quality of their work, resulting in a continual improvement culture and working environment for all. All employees are provided with the food safety training necessary to enable them to perform their tasks and are responsible for ensuring that they do so in a hygienic manner so that the safety of the food they handle is not put at risk. All employees are required to co-operate with any authorized person to ensure that customer, statutory and regulatory obligations are properly complied with. Employees are encouraged and required to notify management about actual or potential food safety issues and are empowered to act to resolve food safety issues within their scope of work.

Approved Supplier Program

- ✓ Microbiological contamination
- ✓ Chemical contamination
- ✓ Physical contamination
- ✓ Allergens and possible allergen contamination
- ✓ Possible substitution or fraud
- ✓ Effect on product quality

Consideration is given to the significance of a material to the quality of the final product. The results of the risk analysis dictate the criteria for supplier assurance, testing and acceptance of raw materials and procedures for supplier monitoring. All risk assessments are reviewed when there are changes to materials and at a minimum annually.

Supplier Category Rating
Final Ingredient/Contract Packer
Raw Ingredient/High Risk Service
Contact Packaging
Non-Contact Packaging
Low Risk Service

AFC

Food Safety Plans

Introduction

We are a leading food company committed to producing safe and legal products in line with legislation and to continuously improve our standards of hygiene, quality and safety in relation to both our product range and the environment in which we manufacture these products. As part of this commitment, all products and processes used in the manufacture of food products are subject to hazard analysis based on the Codex Alimentarius HACCP principles and the requirements of SQF Food Safety Code: Food Manufacturing.

The Food Safety Manual demonstrates due diligence of the company in the effective planning, development and implementation of the food safety management system. These documents are fully supported by the completion of a Food Safety plan and the records specified in this manual for the monitoring of planned activities, maintenance and verification of control measures and by taking effective actions when non-conformity is encountered. All food safety hazards, that may reasonably be expected to occur, are identified by this process and are then fully evaluated and controlled so that our products do not represent a direct or indirect risk to the consumer.

The Food Safety Management System is fully supported by established verification procedures and validation of the control measures/combination of control measures that are implemented through good manufacturing practices (when applicable) or the Food Safety plan.

HACCP Application

The Company Food Safety System has been developed based on CODEX Recommended International Code of Practice General Principles of Food Hygiene 2022 Edition - HAZARD ANALYSIS AND CRITICAL CONTROL POINT (HACCP) SYSTEM AND GUIDELINES FOR ITS APPLICATION - SECTION 19: APPLICATION
19.1 Assemble HACCP Team and Identify Scope (Step 1)
19.2 Describe product (Step 2)
19.3 Identify intended use and users (Step 3)
19.4 Construct flow diagram (Step 4)
19.5 On-site confirmation of flow diagram (Step 5)
19.6 List all potential hazards that are likely to occur and associated with each step, conduct a hazard analysis to identify the significant hazards, and consider any measures to control identified hazards (Step 6/ Principle 1)
19.7 Determine the Critical Control Points (Step 7/ Principle 2)
19.8 Establish validated critical limits for each CCP (Step 8/ Principle 19)
19.9 Establish a Monitoring System for Each CCP (Step 9/ Principle 4)
19.10 Establish corrective actions (Step 10/ Principle 5)
19.11 Validation of the HACCP Plan and Verification Procedures (Step 11/ Principle 6)
19.11.1 Validation of the HACCP Plan
19.11.2 Verification Procedures

Internal Audits

Introduction

The company has established, documented and implemented an internal audit system to verify the Food Safety Management System is effective and continually improved.

Scope

The scope of the Internal Audit System covers all aspects of the food safety management system includes all products manufactured on site, activities conducted on site and all applicable requirements of the SQF Food Safety Code for Manufacturing.

Procedure

The Senior Management has a total commitment to the food safety management system and provides adequate resource in the form of trained and qualified personnel to carry out a comprehensive Internal Audit Schedule. Internal audits are performed to confirm that company management systems are working effectively and to promote continuous improvement. The company philosophy is to audit, review and improve.

The Internal Audit Schedule is planned annually and is designed to comprehensively cover all areas of the Food Safety Management system including procedures, policies and activities. All areas are audited in full at least once per annum; the frequency of audit of each area is based on risk assessment by the Quality Manager.

AFC

Internal Audits

Internal Audit Procedure

Internal auditors are required to be trained and competent in internal audit procedures, and where practical independent of the function being audited.

Internal Auditors are responsible for carrying out the procedure as described below:

1. The site internal audit schedule determines which audits are to be carried out. Each audit is assigned to an auditor independent of that area whenever possible. The auditor must make sure they have the correct audit checklist form to carry out the audits.
2. A date and time for the audit to take place must be agreed with the department. A representative from the department must be present during the audit.
3. The auditor uses a specific audit form and checklist designed by the Quality Manager for each department or area. Objective evidence is recorded to verify compliance and/or non-compliance.
4. The audit report is rated based on the following criteria:
   - RED – Critical/Major Non-conformance(s) identified and imminent risk. Immediate documented Corrective Action is required and a written follow-up necessary.
   - AMBER – Minor Non-Conformance(s) identified there is a potential risk. The Corrective Action required is documented and a verbal follow up is required.
   - GREEN – Satisfactory or Positive with comments or suggestions for improvement
5. When the audit is completed and the report given a rating. Positive as well as negative comments are included in the report. Major Non-conformities are immediate highlighted to the department manager, who is responsible for the corrective and preventive action without undue delay.
6. The Department Manager reviews the audit findings with the auditor and agrees timescales to complete corrective action for the major and minor non-conformances.
7. The Department Manager then signs and retains a copy of the report which includes details of the non-conformances, proposed corrective actions and the agreed time scale to complete the corrective actions. If the audit rating is red then an immediate corrective action plan is reported to the Quality Manager.
8. The Departmental Manager is responsible for documenting the corrective actions taken for all the non-conformances raised.

Product Trace

Introduction

The company has established, implemented, documented a trace system for all product components. This procedure defines how materials and finished products are uniquely identified and traceable as required by the Food Safety Management System and in compliance with all regulatory requirements in the country of production and sale.

Scope

This procedure applies to all process steps where controls are exerted include raw material intake, ingredients and packaging, work-in-progress, final product and dispatched shipment to customer.

Procedure

A system for identification and traceability of product batches is maintained which, in the event of food safety incidents will enable tracking of material batches (including processing aids) through to distributed batches of finished product using label detail and expiry code. For a traceability to be enacted the product expiry code must be known.

The company traceability system takes both the form of documented records and plc program, which enables a full product history to be produced in a timely manner.

Traceability records by Label and Expiry date are maintained and retained for all product batches. This allows the site to trace materials from goods receipt to customer for every delivery. Records are maintained of raw material and packaging usage and finished product volumes. Procedures ensure that label use is reconciled, and any inconsistencies investigated and resolved. Finished product labels are retained – see FS 2.6.3C Label Retention and Check.

Reworked material also remains identifiable and traceable. Where rework or any reworking operation is performed, traceability is maintained by completing traceability records to the finished product to ensure that product safety or legality is not compromised e.g. allergy status, identity preservation and ingredient declarations.

The traceability will provide details on all parts of the product from raw material intake through to filling time. The traceability entails tracing a product backwards from finished package to its raw materials, ensuring that all associated chemical, physical and microbiological tests, cleaning of equipment and all relevant paperwork has been completed and is within specification.

A mass balance exercise is conducted from of raw material and packaging usage and finished product volumes to ensure that all finished products are accounted for.

AFC

Product Trace

For all products, the following information is traceable from the product expiry code:

Stage	Details	Relevant Record
Raw Material Intake	Materials, Time, Date, Temperature, Batch Code, Supplier, Amount, COC or COA	QMR Raw Material Intake Record
Packaging Intake	Packaging Material, Batch Code, Date, Supplier, Amount, COC or COA	QMR Packaging Intake Record
In-Process batches	Batch Name, Records of all Ingredients mixed including Reworked material. Batch Code	QMR In-Process Record
Process Records	Batch Name, Hot/Cold Temperature and Time. Batch Code	QMR Process Record
Bulk Storage Records	Product, Temperature and Time. Batch Code	QMR Bulk Storage Records
Production Records	Product, Time, Date, Label, Expiry Code, Code of Packaging, Temperature, Quantity, Product & Packaging Reconciliation. Batch Code	QMR Production Records
Storage Record	Product, Time, Date, Label, Expiry Code	QMR Storage Record
Dispatch Records	Product, Time, Date, Label, Expiry Code, Amount, Customer	QMR Dispatch Record
Critical Control Records	For all Control Points	QMR Critical Control Records
Cleaning Records	For all stages	QMR Cleaning Records
Delivery Records	Products, Customer & Location Time, Date, Label, Expiry Code, Amount	QMR Delivery Record

The effectiveness of the product trace system is reviewed at least annually as part of the product recall and withdrawal review. These exercises and any corrective actions are documented. Product trace tests are carried out on products from different shifts and for materials (including bulk materials) that are used across a range of products and/or products that are shipped to a wide range of customers.

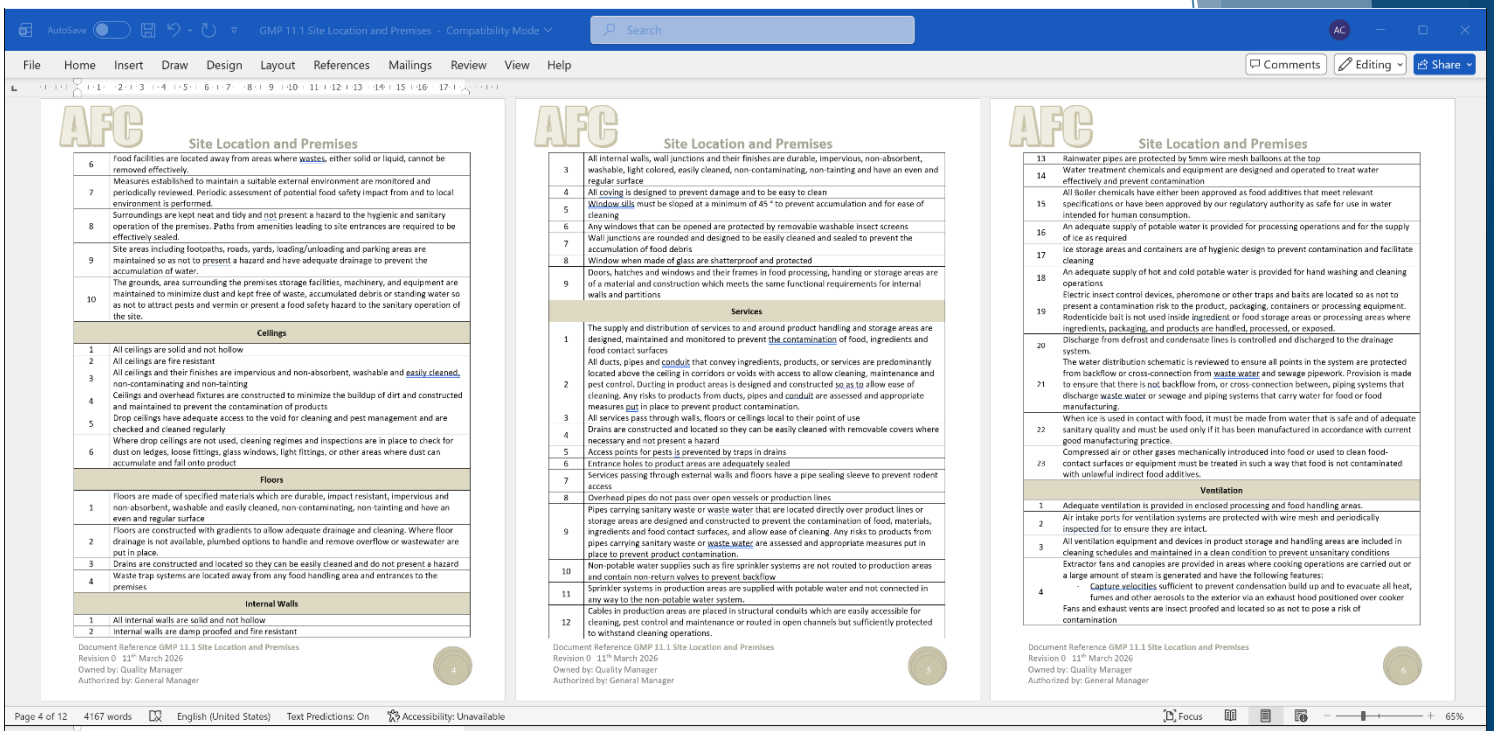
PACKAGE DOCUMENT EXAMPLES



Site Location and Premises

6	Food facilities are located away from areas where wastes, either solid or liquid, cannot be removed effectively.
7	Measures established to maintain a suitable external environment are monitored and periodically reviewed. Periodic assessment of potential food safety impact from and to local environment is performed.
8	Surroundings are kept neat and tidy and not present a hazard to the hygienic and sanitary operation of the premises. Paths from amenities leading to site entrances are required to be effectively sealed.
9	Site areas including footpaths, roads, yards, loading/unloading and parking areas are maintained so as not to present a hazard and have adequate drainage to prevent the accumulation of water.
10	The grounds, area surrounding the premises storage facilities, machinery, and equipment are maintained to minimize dust and kept free of waste, accumulated debris or standing water so as not to attract pests and vermin or present a food safety hazard to the sanitary operation of the site.
	Ceilings
1	All ceilings are solid and not hollow
2	All ceilings are fire resistant
3	All ceilings and their finishes are impervious and non-absorbent, washable and easily cleaned, non-contaminating and non-tainting
4	Ceilings and overhead fixtures are constructed to minimize the buildup of dirt and constructed and maintained to prevent the contamination of products
5	Drop ceilings have adequate access to the void for cleaning and pest management and are checked and cleaned regularly
6	Where drop ceilings are not used, cleaning regimes and inspections are in place to check for dust on ledges, loose fittings, glass windows, light fittings, or other areas where dust can accumulate and fall onto product
	Floors
1	Floors are made of specified materials which are durable, impact resistant, impervious and non-absorbent, washable and easily cleaned, non-contaminating, non-tainting and have an even and regular surface
2	Floors are constructed with gradients to allow adequate drainage and cleaning. Where floor drainage is not available, plumbed options to handle and remove overflow or wastewater are put in place.
3	Drains are constructed and located so they can be easily cleaned and do not present a hazard
4	Waste trap systems are located away from any food handling area and entrances to the premises
	Internal Walls
1	All internal walls are solid and not hollow
2	Internal walls are damp proofed and fire resistant

Document Reference GMP 11.1 Site Location and Premises
Revision 0 11th March 2026
Owned by: Quality Manager
Authorized by: General Manager

Site Location and Premises

3	All internal walls, wall junctions and their finishes are durable, impervious, non-absorbent, washable, light colored, easily cleaned, non-contaminating, non-tainting and have an even and regular surface
4	All coving is designed to prevent damage and to be easy to clean
5	Window sills must be sloped at a minimum of 45 ° to prevent accumulation and for ease of cleaning
6	Any windows that can be opened are protected by removable washable insect screens
7	Wall junctions are rounded and designed to be easily cleaned and sealed to prevent the accumulation of food debris
8	Window when made of glass are shatterproof and protected
9	Doors, hatches and windows and their frames in food processing, handing or storage areas are of a material and construction which meets the same functional requirements for internal walls and partitions
	Services
1	The supply and distribution of services to and around product handling and storage areas are designed, maintained and monitored to prevent the contamination of food, ingredients and food contact surfaces
2	All ducts, pipes and conduit that convey ingredients, products, or services are predominantly located above the ceiling in corridors or voids with access to allow cleaning, maintenance and pest control. Ducting in product areas is designed and constructed so as to allow ease of cleaning. Any risks to products from ducts, pipes and conduit are assessed and appropriate measures put in place to prevent product contamination.
3	All services pass through walls, floors or ceilings local to their point of use
4	Drains are constructed and located so they can be easily cleaned with removable covers where necessary and not present a hazard
5	Access points for pests is prevented by traps in drains
6	Entrance holes to product areas are adequately sealed
7	Services passing through external walls and floors have a pipe sealing sleeve to prevent rodent access
8	Overhead pipes do not pass over open vessels or production lines
9	Pipes carrying sanitary waste or waste water that are located directly over product lines or storage areas are designed and constructed to prevent the contamination of food, materials, ingredients and food contact surfaces, and allow ease of cleaning. Any risks to products from pipes carrying sanitary waste or waste water are assessed and appropriate measures put in place to prevent product contamination.
10	Non-potable water supplies such as fire sprinkler systems are not routed to production areas and contain non-return valves to prevent backflow
11	Sprinkler systems in production areas are supplied with potable water and not connected in any way to the non-potable water system.
12	Cables in production areas are placed in structural conduits which are easily accessible for cleaning, pest control and maintenance or routed in open channels but sufficiently protected to withstand cleaning operations.

Site Location and Premises

13	Rainwater pipes are protected by 5mm wire mesh balloons at the top
14	Water treatment chemicals and equipment are designed and operated to treat water effectively and prevent contamination
15	All Boiler chemicals have either been approved as food additives that meet relevant specifications or have been approved by our regulatory authority as safe for use in water intended for human consumption.
16	An adequate supply of potable water is provided for processing operations and for the supply of ice as required
17	Ice storage areas and containers are of hygienic design to prevent contamination and facilitate cleaning
18	An adequate supply of hot and cold potable water is provided for hand washing and cleaning operations
19	Electric insect control devices, pheromone or other traps and baits are located so as not to present a contamination risk to the product, packaging, containers or processing equipment. Rodenticide bait is not used inside ingredient or food storage areas or processing areas where ingredients, packaging, and products are handled, processed, or exposed.
20	Discharge from defrost and condensate lines is controlled and discharged to the drainage system.
21	The water distribution schematic is reviewed to ensure all points in the system are protected from backflow or cross-connection from waste water and sewage pipework. Provision is made to ensure that there is not backflow from, or cross-connection between, piping systems that discharge waste water or sewage and piping systems that carry water for food or food manufacturing.
22	When ice is used in contact with food, it must be made from water that is safe and of adequate sanitary quality and must be used only if it has been manufactured in accordance with current good manufacturing practice.
23	Compressed air or other gases mechanically introduced into food or used to clean food-contact surfaces or equipment must be treated in such a way that food is not contaminated with unlawful indirect food additives.
	Ventilation
1	Adequate ventilation is provided in enclosed processing and food handling areas.
2	Air intake ports for ventilation systems are protected with wire mesh and periodically inspected for to ensure they are intact.
3	All ventilation equipment and devices in product storage and handling areas are included in cleaning schedules and maintained in a clean condition to prevent unsanitary conditions
4	Extractor fans and canopies are provided in areas where cooking operations are carried out or a large amount of steam is generated and have the following features: - Capture velocities sufficient to prevent condensation build up and to evacuate all heat, fumes and other aerosols to the exterior via an exhaust hood positioned over cooker Fans and exhaust vents are insect proofed and located so as not to pose a risk of contamination

Cleaning and Sanitation

Introduction

The company has established, documented and implemented a Cleaning Management System as part of company Good Manufacturing Practices to ensure the safe hygienic operations on the premises and the production of safe hygienic food.

Scope

The scope of the Cleaning Management System includes all products manufactured on site and activities conducted on site.

Management of Cleaning

It is company policy to provide both clean manufacturing equipment and a clean environment. All facilities and equipment are designed to exclude any source of excessive or unusual contamination and to be easily cleaned. The company supports and maintains comprehensive cleaning procedures for all areas on site with specific attention to high-risk areas.

Detailed cleaning programs and frequencies are documented for all food handling areas, storage areas, amenities, toilets, plant, protective clothing, utensils and equipment and corresponding cleaning checklists completed. All personnel are trained in the specific cleaning requirements and instruction for their areas. When an item is cleaned a record of this cleaning is completed and the cleaning is checked and signed off by the department manager.

Consideration is given to what needs to be cleaned including:

Walls, junctions, partitions, ceilings, and doors
Floors and drains
Ducting, conduit, and pipes
Stairs, catwalks, and platforms
Lights and light fittings
Ventilation equipment
Personnel amenities and facilities
Benches, tables, conveyors, and other mechanical processing equipment
Containers, tubs, and bins used for edible and inedible products
All other equipment and utensils

Each Cleaning Work Instruction will have specific details including:

Protective Equipment to be worn
Cleaning Equipment to be used
Chemicals to be Used

Document Reference GMP 11.2.5 Cleaning and Sanitation
Revision 0 11th March 2026
Owned by: Quality Manager
Authorized by: General Manager

Cleaning and Sanitation

Correct dilution and temperature of Chemicals
Methods used to confirm the correct concentrations of detergents and sanitizers
Contact time for Chemicals
Method of Cleaning
Any precautionary measures
Frequency of cleaning
Personnel responsible for cleaning

The company operates a clean as you go philosophy which is briefed to all staff and monitored by department managers to ensure all personnel keep their areas in a clean and tidy state. Cleaning tools and equipment are of hygienic design and maintained in a condition which does not represent a risk to the product.

Suitably equipped areas are designated for cleaning product containers, knives, cutting boards and other utensils and for cleaning of protective clothing used by staff. These cleaning operations are controlled so as not to interfere with manufacturing operations, equipment or product. Racks and containers for storing cleaned utensils are provided.

A register is maintained of all Cleaning Chemicals approve for use on site. A chemical control sheet is in place for each chemical used on site which includes details the management of use, handling and storage of non-food chemicals including:

- Approved supplier
- Chemical data and safety sheets
- Suitability for food use and where appropriate to use
- Instructions for the avoidance of use of chemicals with strong aromas in manufacturing and storage areas
- Identification of chemicals
- Segregated and secure storage areas
- Use by trained personnel

Cleaning chemicals are fit for purpose, suitably labelled according to regulatory requirements, secured in closed containers and used in accordance with manufacturers' instructions. Detergents and sanitizers must be suitable for use in a food manufacturing environment. All cleaning chemicals and equipment are clearly identified and segregated. Detergents and sanitizers are mixed according to manufacturers' instructions, stored in containers that are suitable for use, and clearly identified. Mix concentrations are verified, records maintained and chemical usage monitored.

Chemicals are applied and stored according to label directions. Empty chemical containers are disposed of according to label directions and regulatory requirements; unused obsolete chemicals are secured until collected by the supplier and disposed of as per regulatory requirements.

Revision 0 11th March 2026
Owned by: Quality Manager
Authorized by: General Manager

Cleaning and Sanitation

Cleaning equipment, tanks, tools, racks, and other items used for cleaning are clearly identified, maintained and stored in a hygienic manner.

Cleaning in Place (CIP) is used where possible for food contact surfaces. Cleaning in place (CIP) systems where used are checked to ensure that they do not pose a chemical contamination risk to raw materials, ingredients or product. The critical elements of the CIP cycle are automatically monitored and recorded:

- Detergent strength minimum 0.8% NaOH
- Temperature minimum 75 ° C on return
- Flow rate minimum 1.5m/s
- Circulation time minimum 15 minutes at correct temperature and causticity
- Disinfection minimum 150ppm PAA

Chemical strengths are verified at a minimum daily by QC staff.

The conditions for efficient cleaning are established and validated (for food contact surfaces) with the detergent and equipment suppliers during commissioning. The set parameters are password protected and changes are only permitted following authorization from the Quality Manager.

During commissioning a schematic plan of the CIP system and pipework is verified. The Engineering team check the system and verify that the CIP is operating effectively and that the:

- ✓ Systems are hygienically designed and drain effectively
- ✓ There are no dead ends
- ✓ There is no build-up of cleaning fluids in vessels during the CIP at the required flow rate
- ✓ Spray balls provide full surface coverage
- ✓ There is adequate separation from active product lines

The CIP sequence consists of:

- Pre-rinse with cold water until visible product residue is clear
- Caustic Recirculation at 80 ° C for 20 minutes
- Cold water rinse until visible detergent residues are undetectable
- Rinse with Per Acetic Acid Disinfectant solution at 150 – 200 ppm

Personnel engaged in CIP activities are trained.

Cleaning procedures are revalidated after building or maintenance work, new product or equipment introduction.

Pest Prevention

Introduction

The company has established, documented and implemented a Pest Prevention System, which is maintained as part of the company Good Manufacturing Practices.

Procedure

The company operates a proactive system for the prevention of contamination of the facility, materials and products by pests and ensures that there are effective controls and processes in place to minimize pest activity. This includes ensuring an integrated pest prevention system is effectively implemented. This procedure is used in conjunction with written Good Manufacturing Practices and HACCP plans to ensure adequate pest control. The Hazards Associated with pests are the contamination of food by bacteria from pests and their droppings and also unwanted contamination of food with pests' bodies, eggs, hairs or droppings. At the factory design stage measures are taken to reduce the risk of contamination by aiming to restrict the access of pests on site.

Raw materials, packaging and finished products are stored so as to minimize the risk of infestation. Where stored product pests are considered a risk, appropriate measures are included in the control program. All incoming goods are inspected for pest infestation. Process equipment handling raw materials vulnerable to infestation is identified and scheduled inspection undertaken. All buildings are required to be adequately proofed as described in GMP 11.1 Site Location and Premises. Waste is managed as per procedures GMP 11.8 Waste Disposal to prevent the accumulation of debris and waste on site to prevent the attraction of pests. In order to prevent risk of contamination no animals are allowed on site.

The company employs a Pest Control Association registered pest control contractor to implement a pest prevention program and maintain the site free from pest contamination. The contract agreement defines:

- Company and contractor key contact personnel
- Description of contracted services and how they will be completed
- Term of the contract
- Equipment and material storage specifications
- A complete inventory of pesticides (must be approved by the regulatory authority for use in a food facility) including safety data sheets detailing the safe use and application of baits and other materials such as insecticide sprays or fumigants
- Emergency call out procedures
- Records and documents to be maintained
- Requirement to notify facility of any changes in service or materials used
- Authorized service personnel including evidence of competency by exam from a recognized organization or regulatory authority

Document Reference FS 11.2.4 Pest Prevention
Revision 0 11th March 2026
Owned by: Quality Manager
Authorized by: General Manager

Pest Prevention

The contracted service provides:

- Monthly site visits and inspections including service records describing current levels of pest activity and recommendations for taking Corrective Actions.
- Inspections including the periphery and internal and external buildings
- The provision of a plan/diagram of the site showing the identification, location, number and type of all pest control monitoring and prevention measures
- Flying insect controls including fly killing units
- Emergency 24-hour call-out service
- Quarterly biologist inspection reports, visit and trend reports with recommendations
- A record of pest sightings and a trend analysis of the frequency of pest activity to target pesticide applications
- A current copy of the certificate of insurance that specifies the liability coverage
- Disposal of unused pest control chemicals and empty containers in accordance with regulatory requirements
- Spill control materials and procedures
- Safety Data Sheet information to ensure proper usage of pesticide chemicals.

Both the contract and service agreement information are held in the Pest Control File which is managed by the Quality Manager who has overall responsibility for pest control on site.

Before agreeing to a contract, the Quality Manager verifies that the pest control contractor is qualified. Copies of training records and qualifications are held in the pest control file for each person who performs pest management services on site. At the start of the contract a detailed survey of the entire facility is completed by a qualified Field Biologist and the results are documented and used to determine placement of monitoring devices.

Exterior Bait Stations

Exterior rodent bait stations are set up to deter rodents from entering the facility. Based on the detailed facility survey, exterior bait stations are placed along the foundation walls on the exterior of the facility and along the site boundaries. Exterior bait stations containing rodenticides are tamper resistant, anchored in place, locked, and labelled. All exterior bait stations are inspected at least monthly. The bait stations are checked more often when activity levels increase. Baits are secured inside bait stations, in good condition, and replaced as needed. Bait stations are placed at intervals of 15 m although areas of high rodent activity may have a higher concentration of bait stations.

Interior Monitoring

Based on the detailed Field Biologist survey, interior monitoring devices are placed in strategic sensitive areas specific to the rodent species, and other areas of pest activity, including:

- Raw material warehouse

Document Reference FS 11.2.4 Pest Prevention
Revision 0 11th March 2026
Owned by: Quality Manager
Authorized by: General Manager

Pest Prevention

- Maintenance workshop
- Finished product warehouse
- Areas with the potential for rodent access due to traffic
- Overhead areas when roof rat activity is evident
- High traffic areas
- Doors that open to the exterior of the facility

Interior rodent monitoring devices identify and capture rodents that gain access to the facility. Toxic baits are not used for interior monitoring. Bait are not used inside ingredient or food storage areas or processing areas, indicator baits that conform to local regulations are used inside processing areas. Interior monitoring devices are placed along perimeter walls at a distance of 10m and secured in position. Spacing is reduced and the number of traps is increased when there are increased pest activity levels. Interior monitoring devices are inspected at least weekly.

Interior monitoring devices include:

- Mechanical traps
- Glue boards
- Gassing traps
- Live cage traps
- See-saw tubes
- Electrocution traps
- Extended trigger traps that send alert e-mails or text messages

Electronic Flying Insect Killing Units (EFKs)

EFKs assist in the identification and monitoring of flying insects. For food safety reasons, all EFKs have shatter-resistant tubes and are positioned at least 3 m from food contact surfaces, exposed products, packaging, and raw materials in food handling areas. EFKs are installed away from entrance areas in a way that does not attract insects to the facility. EFKs are used to monitor flying insect activity at locations that are likely to allow access to the facility. All units are checked weekly to ensure they are working. Each unit is serviced quarterly by the pest control contractor, the service includes:

- Emptying collection trays and analysis of contents
- Cleaning the units
- Repairs
- Reporting volume and type of insects caught including trends
- Annually tube change at the beginning of the active season.

All EFK services records are kept in the pest control file, the Quality Manager uses the EFK service information to identify and eliminate the source of insect activity.

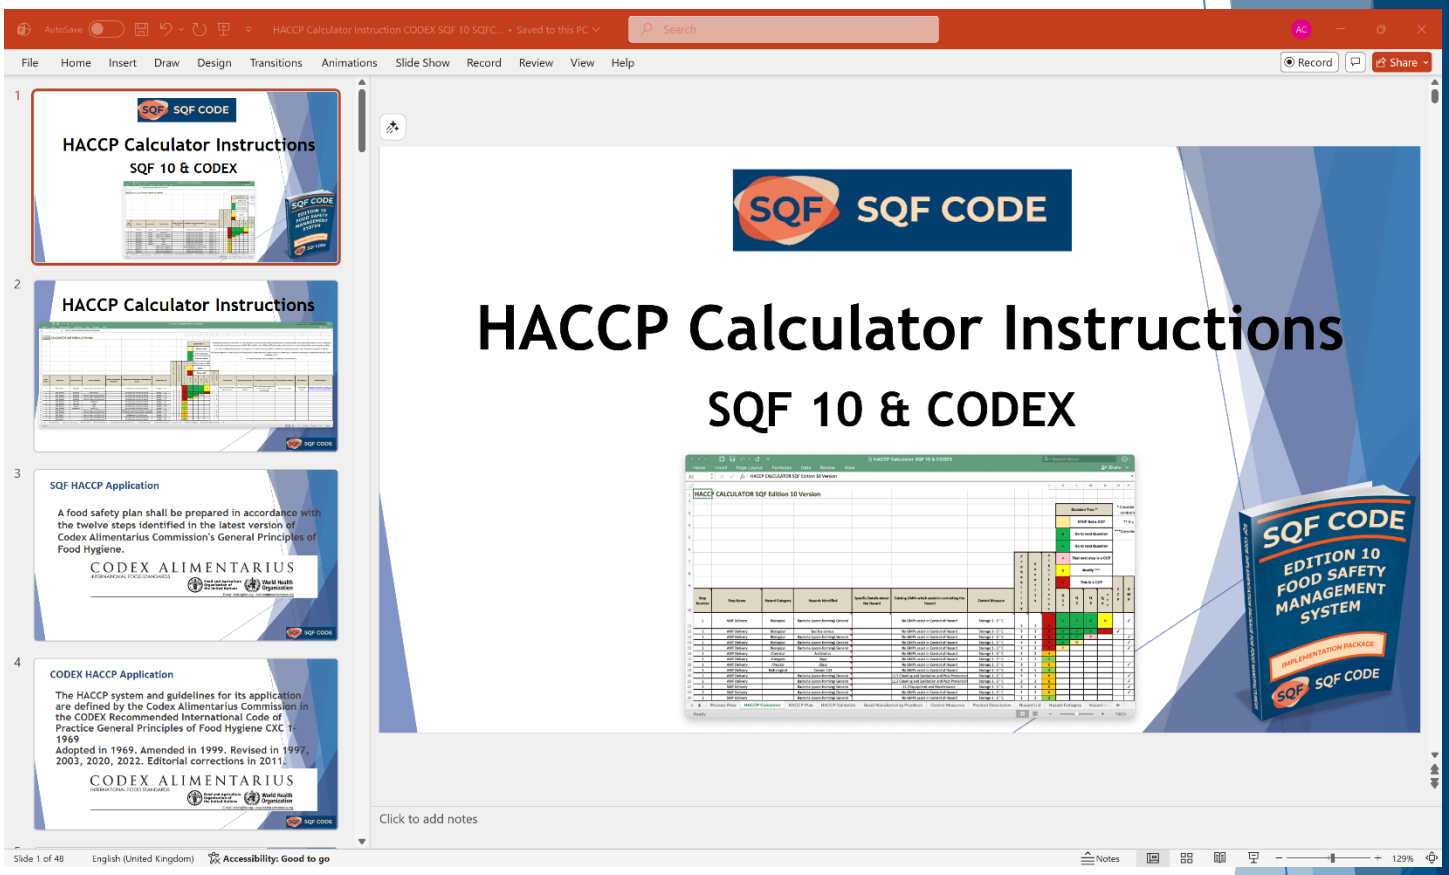
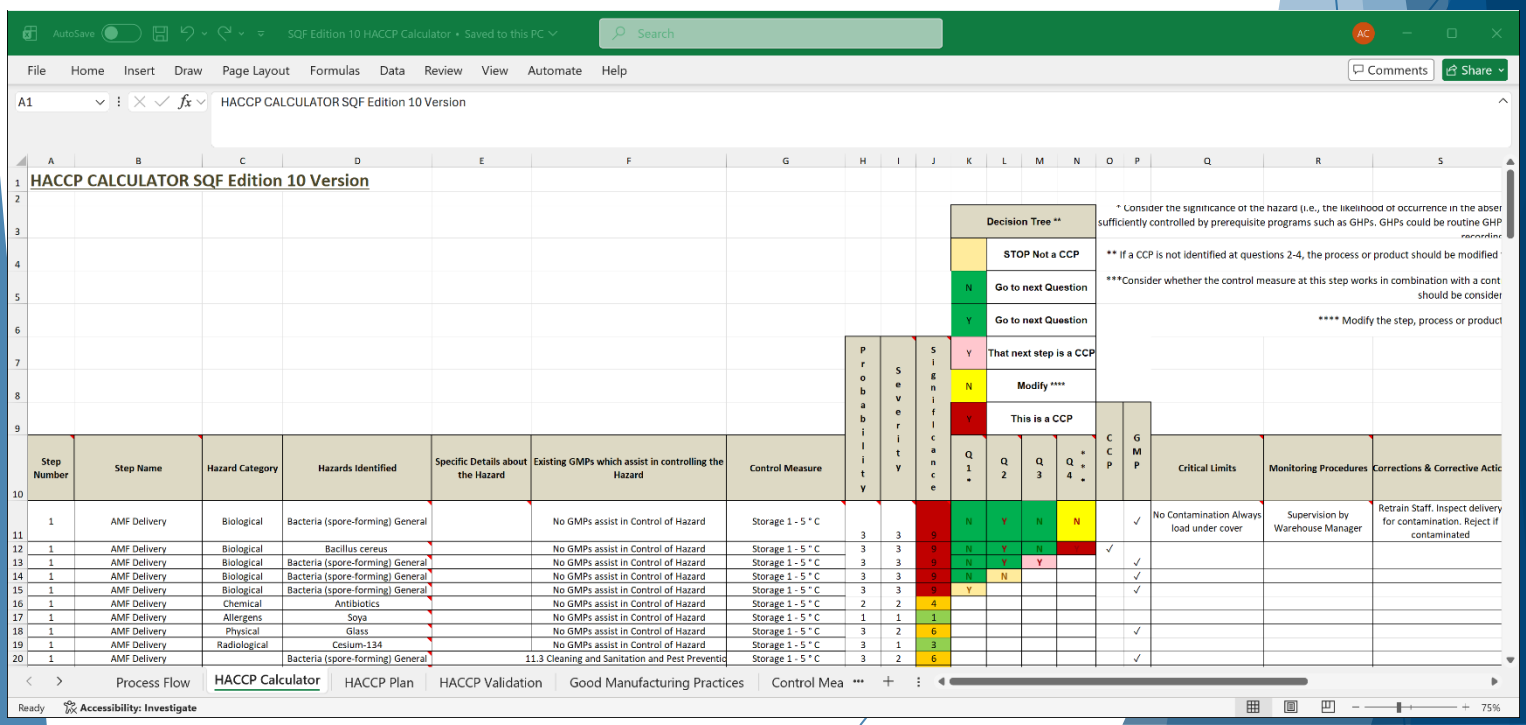
Supplementary HACCP Documents, Guidance and Tools

The HACCP Calculator and Instructions

HACCP Calculator based SQF Edition 10 requirements and the latest version of CODEX General Principles of Food Hygiene Chapter Two HACCP System and Guidelines for its Application including a new Decision Tree.



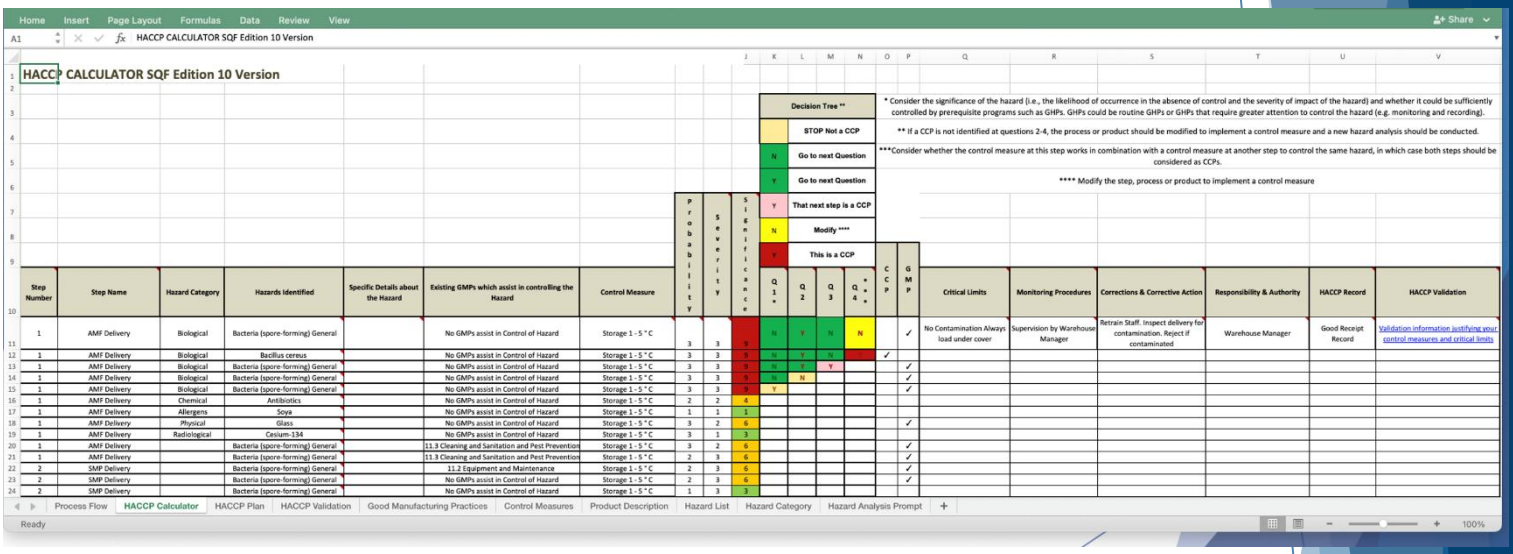


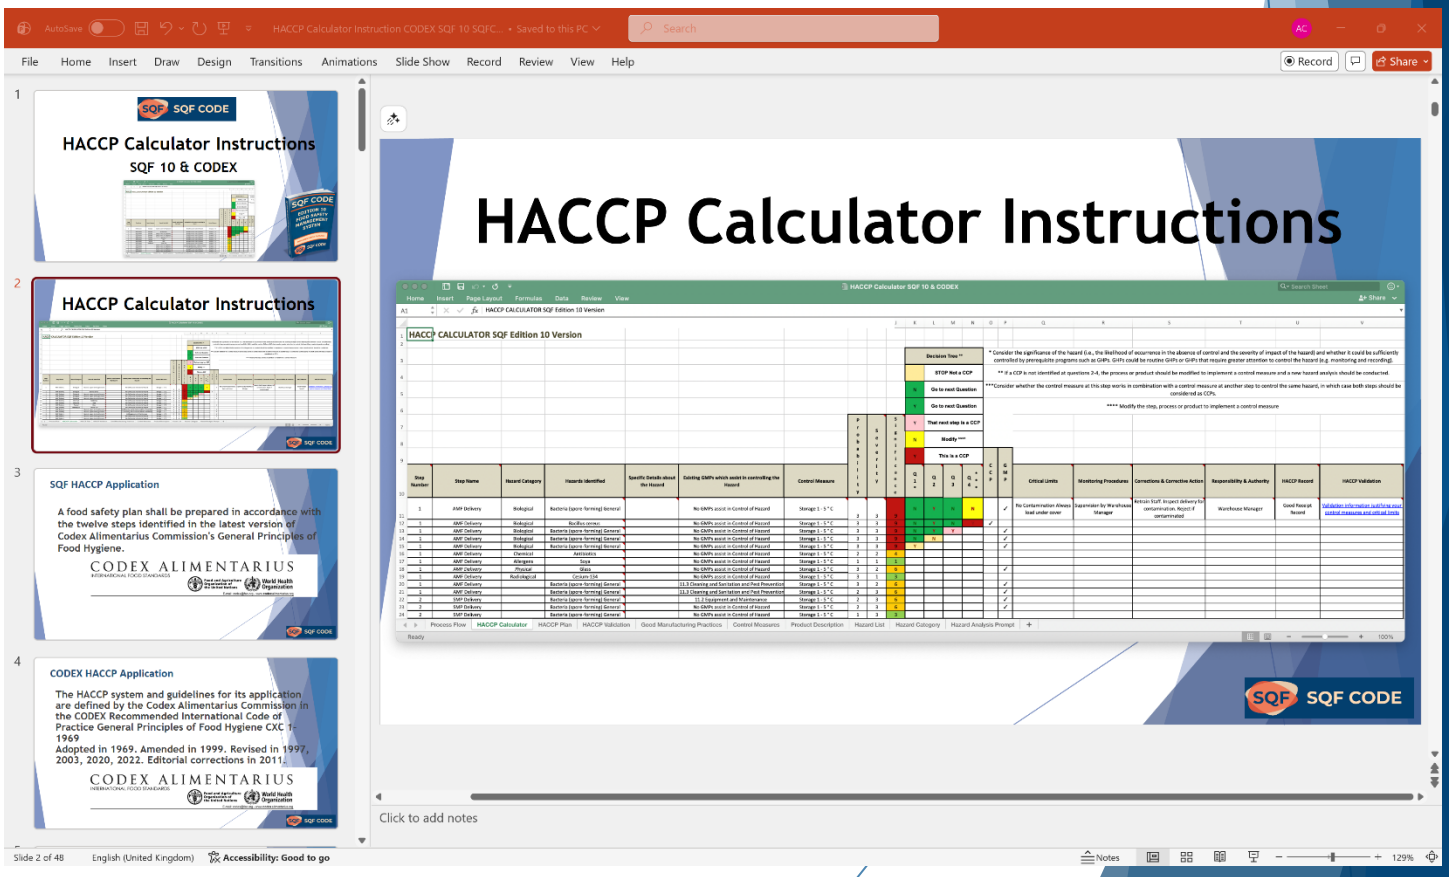
The HACCP Calculator is a tool that allows you to present you Hazard Analysis in a clear and logical manner.

From the process flow you select hazards and assess them to identify significant hazards.

You then use the in-built CODEX Decision Tree questions to determine your Critical Control Points.

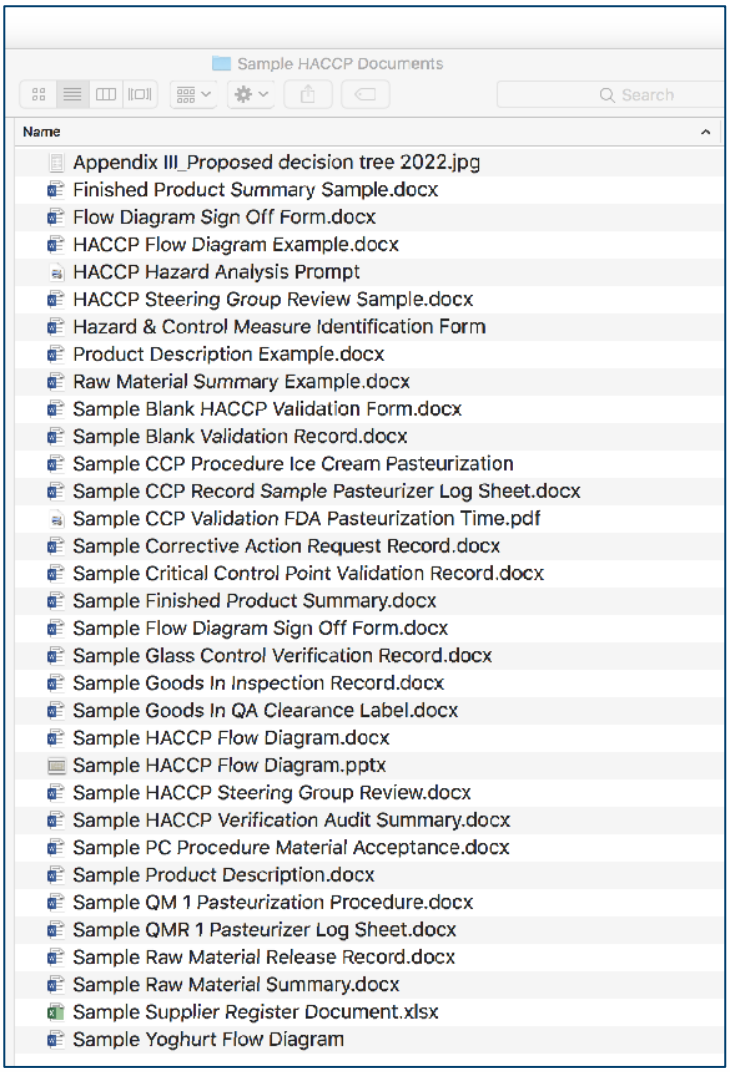
Following that the HACCP Calculator assists in developing Food Safety Plans to control Significant Hazards.

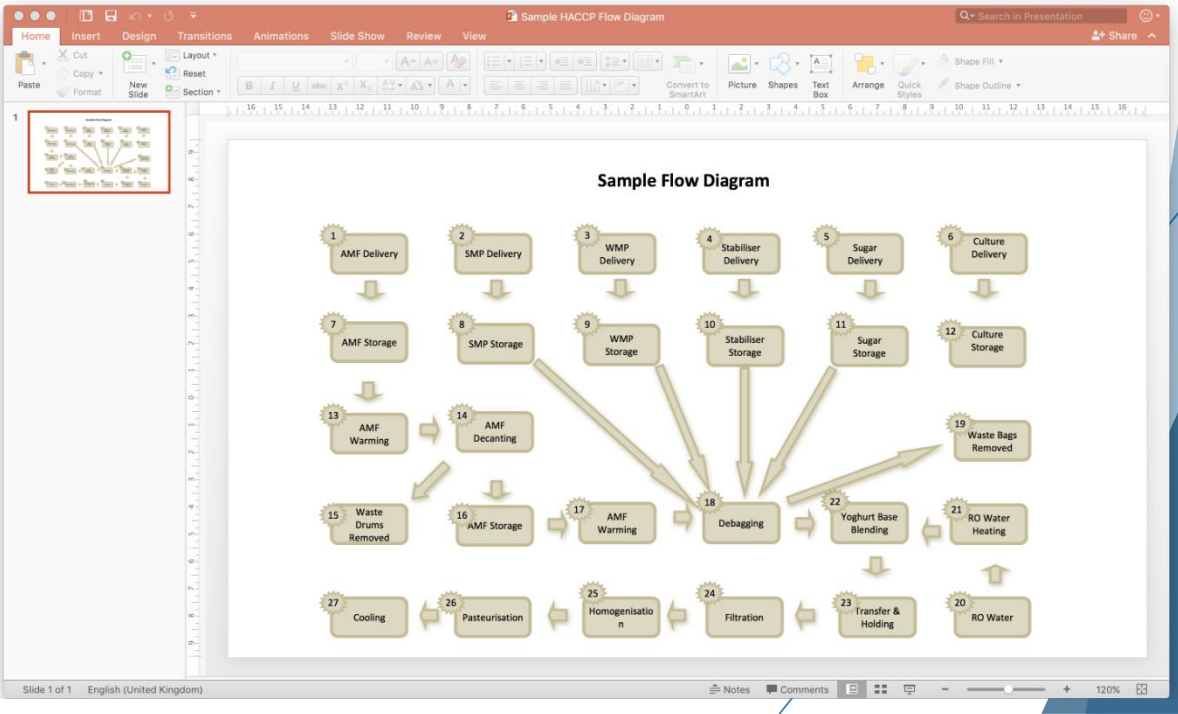




Supplementary HACCP Documents, Guidance and Tools

Useful additional HACCP Documents are included





There are supplementary HACCP document templates including Flow Diagrams, Product Description, a Hazard Analysis Prompt, an example Critical Control Procedure and various HACCP Records.

Ice Cream Pasteurization Procedure

PARAMETERS	LIMITS	UNITS
Preheater in Temp.	45 - 50	°C
Holding time (CCP) Min. 15 seconds	Min 15	s
Pasteurizer in Press.	0.5 – 1.0	Bar
Pasteurization Temp.	73 ± 1	°C
End Holding Temp. (CCP) Min. 72.0 °C	73 ± 1	°C
F. Cooler Out Flow Rate	5.0-5.25	m³/h
Milk Outlet Temp.	4 ± 2	°C
Product Outlet Overpressure	> 1.0	Bar
Homo Press. (1st/ 2nd Stage)	150/50	Bar

Ensure that the Pasteurization Temperature is 73 ± 1 °C (Min.72 °C) and the holding time is a minimum of 15 seconds.

During processing, to change to another Ice Cream Tank put the pasteurizer on recirculation, change to the required tank then press forward flow.

When the product finishes flush the pasteurizer with water. Record the Volume Processed, Processing Time & Production End Time.

After rinsing proceed to Clean in Place. Record the CIP Start & End Times.

IF ANY PROCESS PARAMETERS ARE OUT OF SPECIFICATION DO NOT CONTINUE TO PROCESS, PUT THE PASTEURISER ON RECIRCULATION AND CONTACT THE PASTEURISER SUPERVIZER IMMEDIATELY.

Hazard Analysis Prompt

Hazard Analysis Prompt	Answers in Detail
Are the raw materials, ingredients or food contact packaging likely to have chemical, biological or physical hazards present? Are there any characteristics in the composition of the food during which can prevent a hazard? E.g. Preservatives, pH, Water Activity	
Does the food permit survival or multiplication of pathogens and at which stages?	
Does the process include a controllable step that destroys pathogens or their toxins? (Consider spores) Is it possible the product could be subject to recontamination?	
Is product contamination (consider direct and indirect contamination) with hazardous microbiological organisms from equipment, process environment or personnel likely to occur?	
Is product contamination (consider direct and indirect contamination) with hazardous chemical substances from equipment, process environment or personnel likely to occur?	
Is product contamination (consider direct and indirect contamination) with hazardous physical objects from equipment, process environment or personnel likely to occur?	
Is it likely that the food contains viable spore forming pathogens?	
Is it likely that the food contains viable non-spore forming pathogens?	
What is the normal microbial content of the food stored under proper conditions? Does the microbial population increase during the time the food is stored before consumption?	
Does that increase in microbial population alter the safety of the food?	
Does the layout of the facility provide an adequate separation of raw materials from ready-to-eat foods? Will the equipment provide the time and temperature control that is necessary to meet critical limits?	
Is the equipment reliable or is it prone to frequent breakdowns?

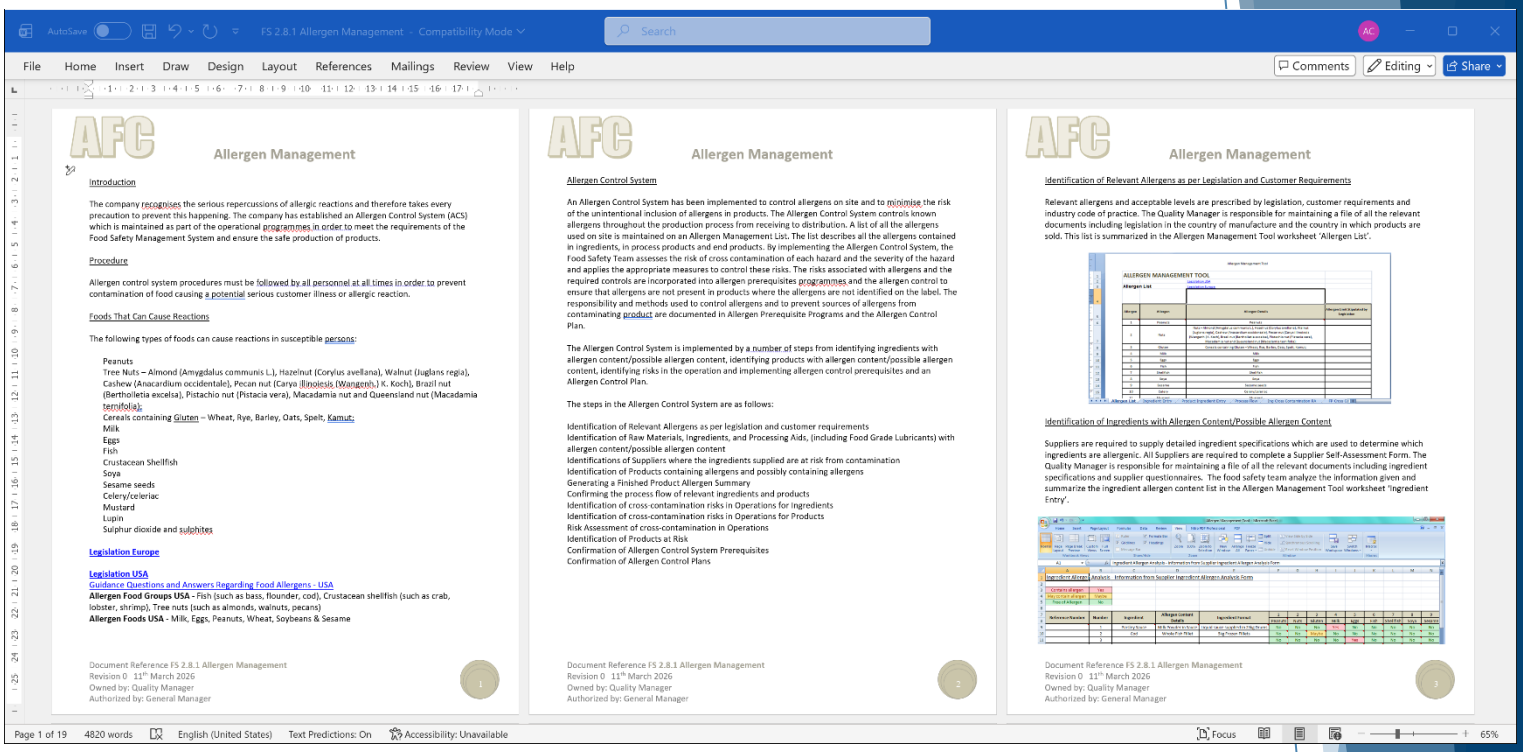
Supplementary Allergen Management Tools

FS 2.8.1 Allergens Management is a comprehensive Allergen Management Procedure which is supplemented by Allergen Management Tools and other useful Allergen Control Documents



Allergen Management

Introduction

The company recognises the serious repercussions of allergic reactions and therefore takes every precaution to prevent this happening. The company has established an Allergen Control System (ACS) which is maintained as part of the operational programmes in order to meet the requirements of the Food Safety Management System and ensure the safe production of products.

Procedure

Allergen control system procedures must be followed by all personnel at all times in order to prevent contamination of food causing a potential serious customer illness or allergic reaction.

Foods That Can Cause Reactions

The following types of foods can cause reactions in susceptible persons:

Peanuts
Tree Nuts – Almond (Amygdalus communis L.), Hazelnut (Corylus avellana), Walnut (Juglans regia), Cashew (Anacardium occidentale), Pecan nut (Carya illinoiesis (Wangenh.) K. Koch), Brazil nut (Bertholletia excelsa), Pistachio nut (Pistacia vera), Macadamia nut and Queensland nut (Macadamia ternifolia);
Cereals containing Gluten – Wheat, Rye, Barley, Oats, Spelt, Kamut;
Milk
Eggs
Fish
Crustacean Shellfish
Soya
Sesame seeds
Celery/celeriac
Mustard
Lupin
Sulphur dioxide and sulphites

Legislation Europe

Legislation USA
Guidance Questions and Answers Regarding Food Allergens - USA
Allergen Food Groups USA - Fish (such as bass, flounder, cod), Crustacean shellfish (such as crab, lobster, shrimp), Tree nuts (such as almonds, walnuts, pecans)
Allergen Foods USA - Milk, Eggs, Peanuts, Wheat, Soybeans & Sesame

Allergen Management

Allergen Control System

An Allergen Control System has been implemented to control allergens on site and to minimise the risk of the unintentional inclusion of allergens in products. The Allergen Control System controls known allergens throughout the production process from receiving to distribution. A list of all the allergens used on site is maintained on an Allergen Management List. The list describes all the allergens contained in ingredients, in process products and end products. By implementing the Allergen Control System, the Food Safety Team assesses the risk of cross contamination of each hazard and the severity of the hazard and applies the appropriate measures to control these risks. The risks associated with allergens and the required controls are incorporated into allergen prerequisites programmes and the allergen control to ensure that allergens are not present in products where the allergens are not identified on the label. The responsibility and methods used to control allergens and to prevent sources of allergens from contaminating product are documented in Allergen Prerequisite Programs and the Allergen Control Plan.

The Allergen Control System is implemented by a number of steps from identifying ingredients with allergen content/possible allergen content, identifying products with allergen content/possible allergen content, identifying risks in the operation and implementing allergen control prerequisites and an Allergen Control Plan.

The steps in the Allergen Control System are as follows:

Identification of Relevant Allergens as per legislation and customer requirements
Identification of Raw Materials, Ingredients, and Processing Aids, (including Food Grade Lubricants) with allergen content/possible allergen content
Identifications of Suppliers where the Ingredients supplied are at risk from contamination
Identification of Products containing allergens and possibly containing allergens
Generating a Finished Product Allergen Summary
Confirming the process flow of relevant ingredients and products
Identification of cross-contamination risks in Operations for Ingredients
Identification of cross-contamination risks in Operations for Products
Risk Assessment of cross-contamination in Operations
Identification of Products at Risk
Confirmation of Allergen Control System Prerequisites
Confirmation of Allergen Control Plans

Allergen Management

Identification of Relevant Allergens as per Legislation and Customer Requirements

Relevant allergens and acceptable levels are prescribed by legislation, customer requirements and industry code of practice. The Quality Manager is responsible for maintaining a file of all the relevant documents including legislation in the country of manufacture and the country in which products are sold. This list is summarized in the Allergen Management Tool worksheet 'Allergen List'.

Identification of Ingredients with Allergen Content/Possible Allergen Content

Suppliers are required to supply detailed ingredient specifications which are used to determine which ingredients are allergenic. All Suppliers are required to complete a Supplier Self-Assessment Form. The Quality Manager is responsible for maintaining a file of all the relevant documents including ingredient specifications and supplier questionnaires. The food safety team analyze the information given and summarize the ingredient allergen content list in the Allergen Management Tool worksheet 'Ingredient Entry'.

Product Development Tools

Product Development

Following the HACCP system review the Quality Manager and the Operations Manager authorize the process changes and a completed Process Change Approval form is held on file.

The Quality Manager and Operations Manager are responsible for ensuring that the site is capable of accommodating the new process or product and maintaining acceptable levels of quality and food safety.

A new specification will be created, defining raw materials, packaging and suppliers, Food Safety Plan, GMPs(s), in-process and finished product specifications and artwork, labelling and coding details. The New Product Development Manager confirms that the packaging complies with specifications, relevant food safety legislation and is fit for purpose. For all product claims the New Product Development Manager validates the product formulation and product process are capable of meeting the product claim prior to launch. Finished product specifications are agreed and authorized by the Development Manager and Quality Manager. The Quality Manager verifies that the labelling is adequate in informing customers of any critical allergen ingredients, relevant nutritional contents, storage, preparation and serving instructions and that the customer information meets legislation for the destination country.

The Quality Manager and Product Development Manager are responsible for ensuring that products that have not been in production for more than a year, or products that were previously discontinued are regarded as new products and are required to follow the product development procedure for approval prior to relaunch.

Product Development

Appendix 1 NPD Stages

STAGE 1: Product Brief
- Product Brief supplied to NPD
- Critical path generation
STAGE 2: Kitchen work stage
- Specification sent for New Ingredients
- Preliminary Specification Checked and signed off
- Raw Material evaluated by Quality against the Spec
- Food contact packaging confirmed as suitable for intended use by Supplier
- Initial Product costing done
- All recipes documented
STAGE 3: Approval of Kitchen Product
- Product Approval by Customer
- Reference sample saved
-Full raw material Specification & Supplier Questionnaire or audit, checked, completed and to be signed by both parties
- Project Schedule updated
- Handover to process development
STAGE 4: Factory trials
- Food Safety Team approve factory trial
- Sign off/ approval of any new equipment

Document Reference FS 2.3.1 Product Development
Revision 0 11th March 2026
Owned by: Product Development Manager
Authorized by: Quality Manager

Product Development

- Positively release ingredients for factory trial
- Trial appraisal forms/ report completed
- Yield Analysis
- Statistical Analysis
- Set Points Established
- Process capability study completed
- Initial Standards Tolerances set
- Scale up to production level
- Initial Packaging Trials undertaken
- Transit trials to store
- Re-cost Product if required
STAGE 5: Approval of Factory Product & Product Analysis
- Consumer panel if required
- Reference sample saved
- Samples sent for Nutritional
- Nutritional Results received
- Food Safety (HACCP) drawn up & verified
- Verification/Validation of the cooking instructions
- Samples sent for micro Shelf-life from 3 factory trial runs
- Micro shelf-life results forwarded to Quality Manager
- Organoleptic shelf-life started from 3 factory trial runs

Whole Milk Summer Fruit Bio Yoghurt 100g

Manufacturing Site	
Contact Details	
Telephone	
Fax	

Product Description	
A whole milk stirred fruited bio yogurt with a creamy mixed berry flavour	
Organoleptic	
Appearance	Mauve in colour, smooth, shiny yoghurt with blackberry & raspberry pieces
Aroma	A fresh fruity mixed berry aroma
Flavour	Sweet creamy fresh mixed berry flavour with a slight lactic note

Ingredients
Potable Water, Whole Milk Powder, Sugar, Blackberries (3.75%), Raspberries (3.75%) Summer Fruit Syrup [(water, glucose syrup, thickeners (modified starch, carrageenan), black carrot juice concentrate, woodberry flavor, sodium citrate, potassium sorbate)], Milk Protein, Skim Milk Powder, Stabiliser (acetylated distarch adipate, gelatin, guar gum, pectins), Yoghurt Culture, Bifidobacterium, Lactobacillus acidophilus
Allergens
Milk

Processing, Manufacturing + Packing Parameters	
1. Mix and standardise the base	Butterfat = 3.5 – 3.7% Total Solids = 20.0 – 21.0
2. Homogenise:	200 Bar

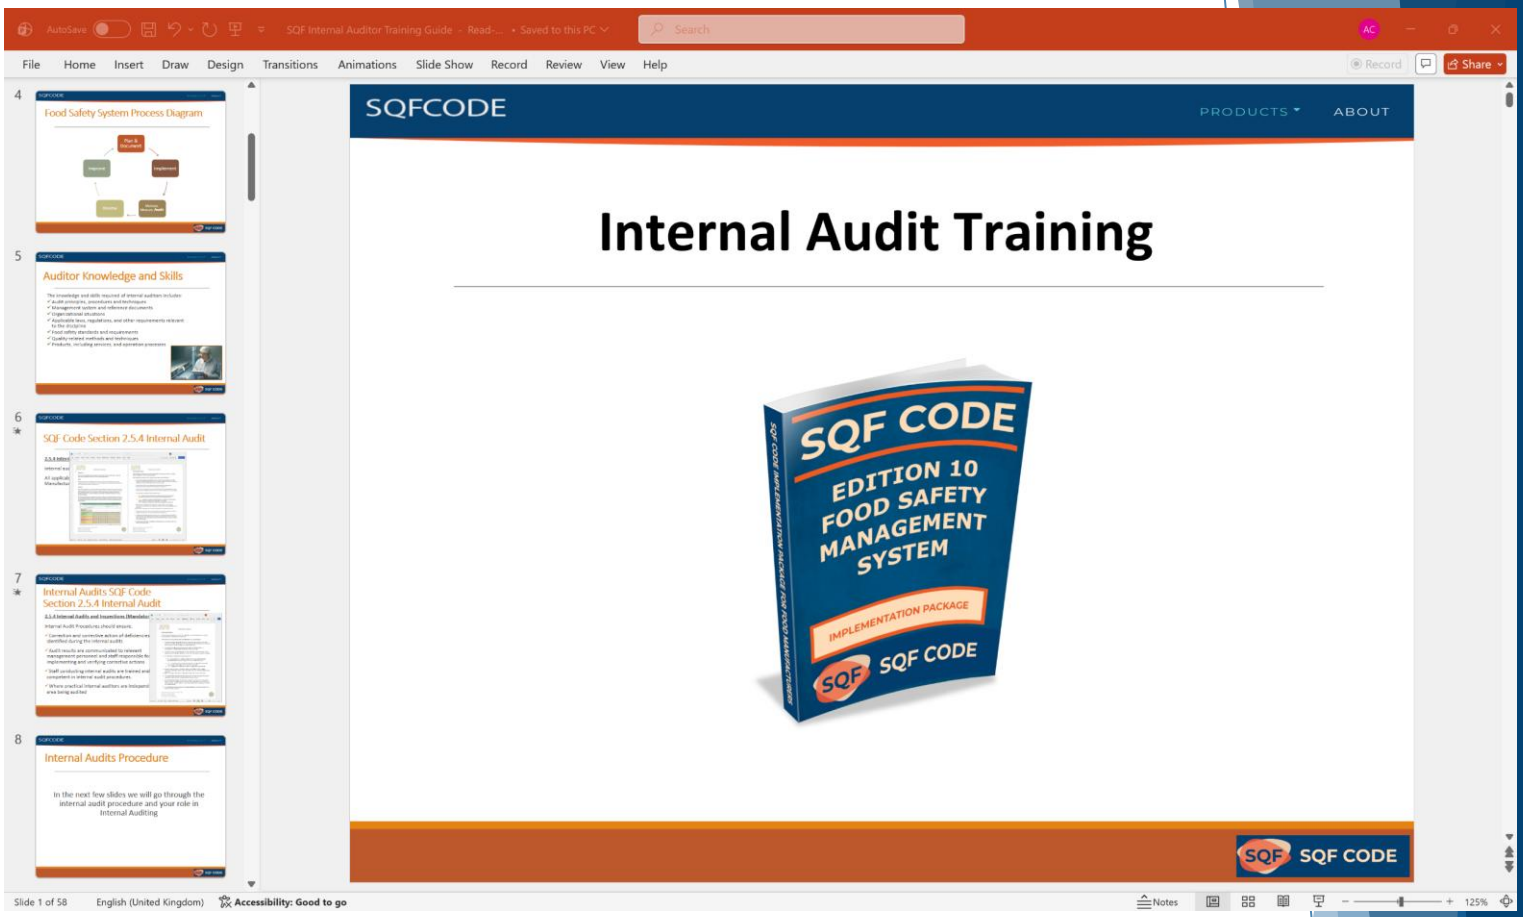
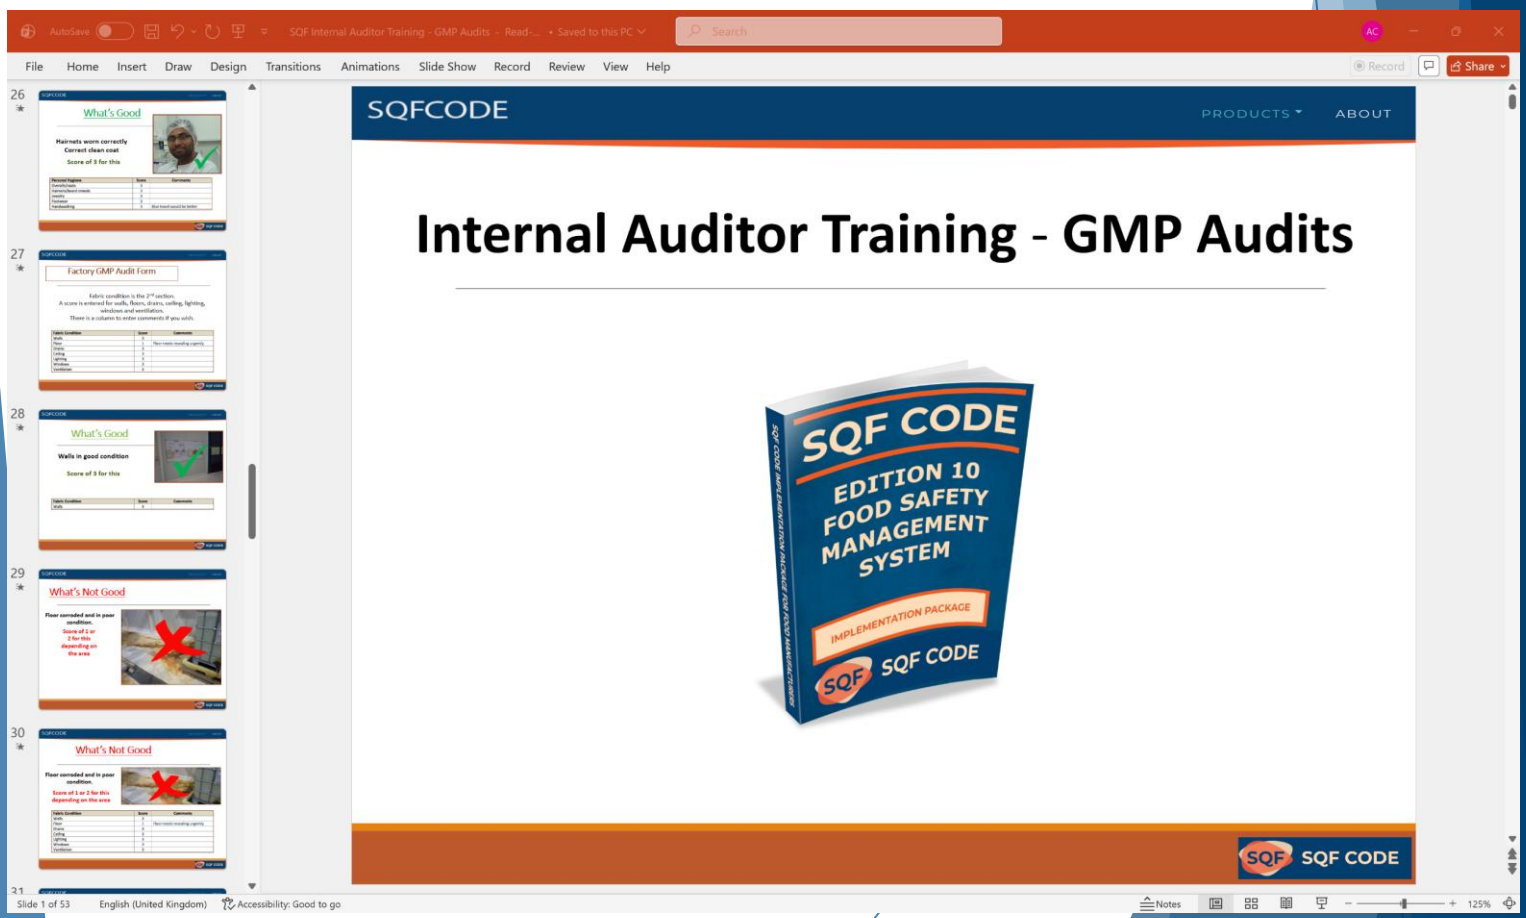
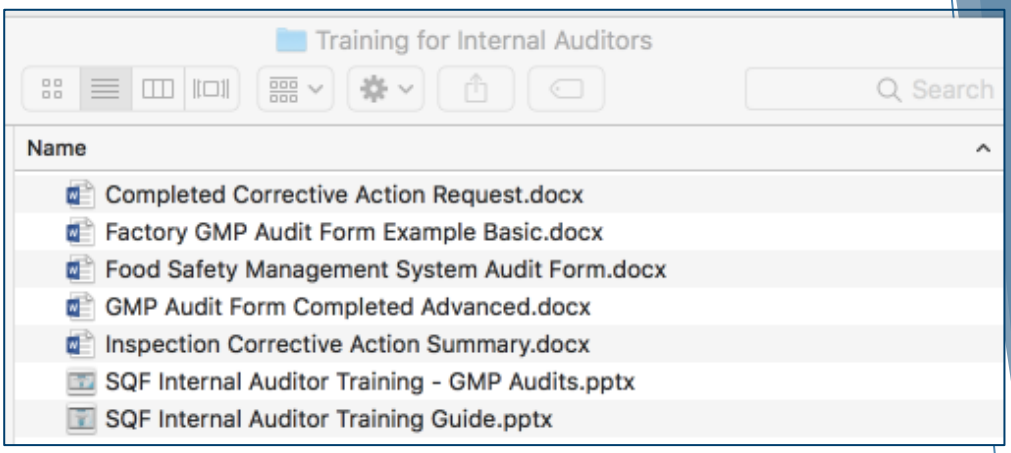
Supplementary Internal Auditor Training & Templates

FS 2.5.4 Internal Audits & Inspections Procedure is supported by two Auditor training presentations and sample auditing forms.

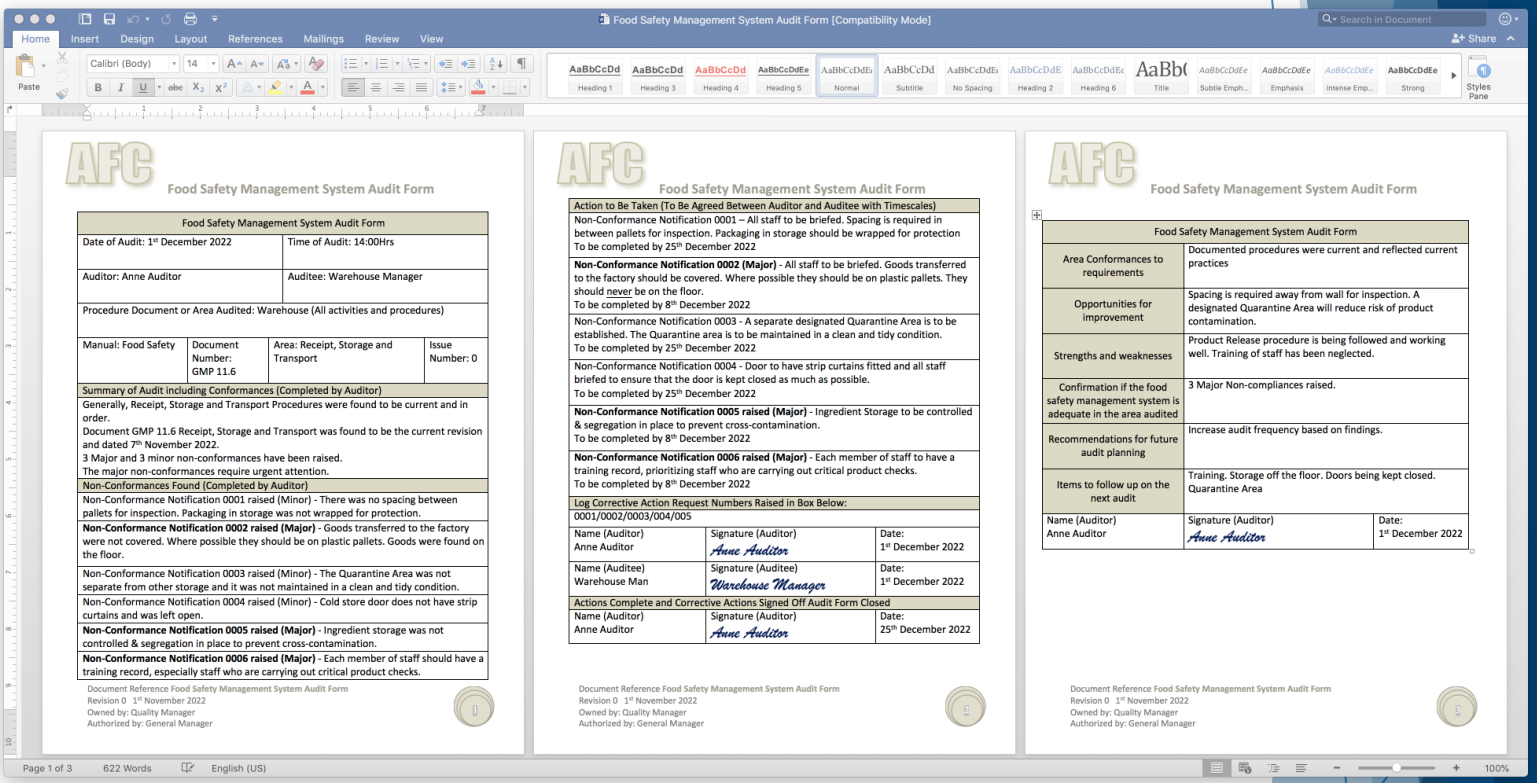




Supplementary Internal Auditor Training & Templates



There are Sample Auditing, Inspection and Corrective Action Forms



Food Safety Management System Audit Form

Food Safety Management System Audit Form			
Date of Audit: 1st December 2022		Time of Audit: 14:00Hrs	
Auditor: Anne Auditor		Auditee: Warehouse Manager	
Procedure Document or Area Audited: Warehouse (All activities and procedures)			
Manual: Food Safety	Document Number: GMP 11.6	Area: Receipt, Storage and Transport	Issue Number: 0
Summary of Audit including Conformances (Completed by Auditor)			
Generally, Receipt, Storage and Transport Procedures were found to be current and in order. Document GMP 11.6 Receipt, Storage and Transport was found to be the current revision and dated 7th November 2022. 3 Major and 3 minor non-conformances have been raised. The major non-conformances require urgent attention.			
Non-Conformances Found (Completed by Auditor)			
Non-Conformance Notification 0001 raised (Minor) - There was no spacing between pallets for inspection. Packaging in storage was not wrapped for protection.			
Non-Conformance Notification 0002 raised (Major) - Goods transferred to the factory were not covered. Where possible they should be on plastic pallets. Goods were found on the floor.			
Non-Conformance Notification 0003 raised (Minor) - The Quarantine Area was not separate from other storage and it was not maintained in a clean and tidy condition.			
Non-Conformance Notification 0004 raised (Minor) - Cold store door does not have strip curtains and was left open.			
Non-Conformance Notification 0005 raised (Major) - Ingredient storage was not controlled & segregation in place to prevent cross-contamination.			
Non-Conformance Notification 0006 raised (Major) - Each member of staff should have a training record, especially staff who are carrying out critical product checks.			

Food Safety Management System Audit Form

Action to Be Taken (To Be Agreed Between Auditor and Auditee with Timescales)		
Non-Conformance Notification 0001 – All staff to be briefed. Spacing is required in between pallets for inspection. Packaging in storage should be wrapped for protection To be completed by 25th December 2022		
Non-Conformance Notification 0002 (Major) - All staff to be briefed. Goods transferred to the factory should be covered. Where possible they should be on plastic pallets. They should never be on the floor. To be completed by 8th December 2022		
Non-Conformance Notification 0003 - A separate designated Quarantine Area is to be established. The Quarantine area is to be maintained in a clean and tidy condition. To be completed by 25th December 2022		
Non-Conformance Notification 0004 - Door to have strip curtains fitted and all staff briefed to ensure that the door is kept closed as much as possible. To be completed by 25th December 2022		
Non-Conformance Notification 0005 raised (Major) - Ingredient Storage to be controlled & segregation in place to prevent cross-contamination. To be completed by 8th December 2022		
Non-Conformance Notification 0006 raised (Major) - Each member of staff to have a training record, prioritizing staff who are carrying out critical product checks. To be completed by 8th December 2022		
Log Corrective Action Request Numbers Raised in Box Below:		
0001/0002/0003/004/005		
Name (Auditor) Anne Auditor	Signature (Auditor) *Anne Auditor*	Date: 1st December 2022
Name (Auditee) Warehouse Man	Signature (Auditee) *Warehouse Manager*	Date: 1st December 2022
Actions Complete and Corrective Actions Signed Off Audit Form Closed		
Name (Auditor) Anne Auditor	Signature (Auditor) *Anne Auditor*	Date: 25th December 2022

Food Safety Management System Audit Form

Food Safety Management System Audit Form		
Area Conformances to requirements	Documented procedures were current and reflected current practices	
Opportunities for improvement	Spacing is required away from wall for inspection. A designated Quarantine Area will reduce risk of product contamination.	
Strengths and weaknesses	Product Release procedure is being followed and working well. Training of staff has been neglected.	
Confirmation if the food safety management system is adequate in the area audited	3 Major Non-compliances raised.	
Recommendations for future audit planning	Increase audit frequency based on findings.	
Items to follow up on the next audit	Training. Storage off the floor. Doors being kept closed. Quarantine Area	
Name (Auditor) Anne Auditor	Signature (Auditor) *Anne Auditor*	Date: 1st December 2022

FS 2.7.2A Food Fraud Assessment Template

Food Fraud Vulnerability Assessment & Plan Summary

Risks to consider are emerging and historical issues, Historical evidence of substitution or adulteration, Value of the material, Availability - e.g. a poor harvest may restrict availability and may increase the potential for adulteration, Sophistication of routine testing to identify adulterants (If testing within the supply chain is comprehensive and focused on potential fraud issues, then the likelihood is less), Country of origin, Length and complexity of the supply chain

Score	Product or Material Category Rating
5	Very high - a high profile product or material with recent reports of adulteration published by regulatory authorities – action or monitoring is required to ensure only genuine materials are purchased.
4	High - a high profile product or material that provides an atractive target for potential adulteration – some action and/or monitoring is required to ensure only genuine materials are purchased.
3	Medium - a product or material that may be adulterated - action is required to ensure only genuine materials are purchased.
2	Low - this product or material is unlikely to be a target for substitution or adulteration; however a re-assessment may be necessary if new information becomes available.
1	Negligible - no further action required as the product or material is extremely unlikely to be a target for food fraud.

Assessment Number	Assessment Category	Details of Product or Material or Service	Details	Available Information and Data Review: Historical evidence of substitution or adulteration	Available Information and Data Review: Economic factors which may make adulteration or	Available Information and Data Review: Ease of access to raw materials through the supply chain	Available Information and Data Review: Sophistication of routine testing to identify adulterants	Available Information and Data Review: Nature of the Raw Material	Potential Risk	Potential for Food Fraud Rating	Current Controls in Place	Risk Assessment: Likelihood	Risk Assessment: Public Health Consequence	Risk Rating: Public Health Risk Rating	Food Fraud Mitigation Plan: Control Measures Required: Primary Control	Control Measures Required: Secondary Control	Primary Control Responsibility	Secondary Control Responsibility

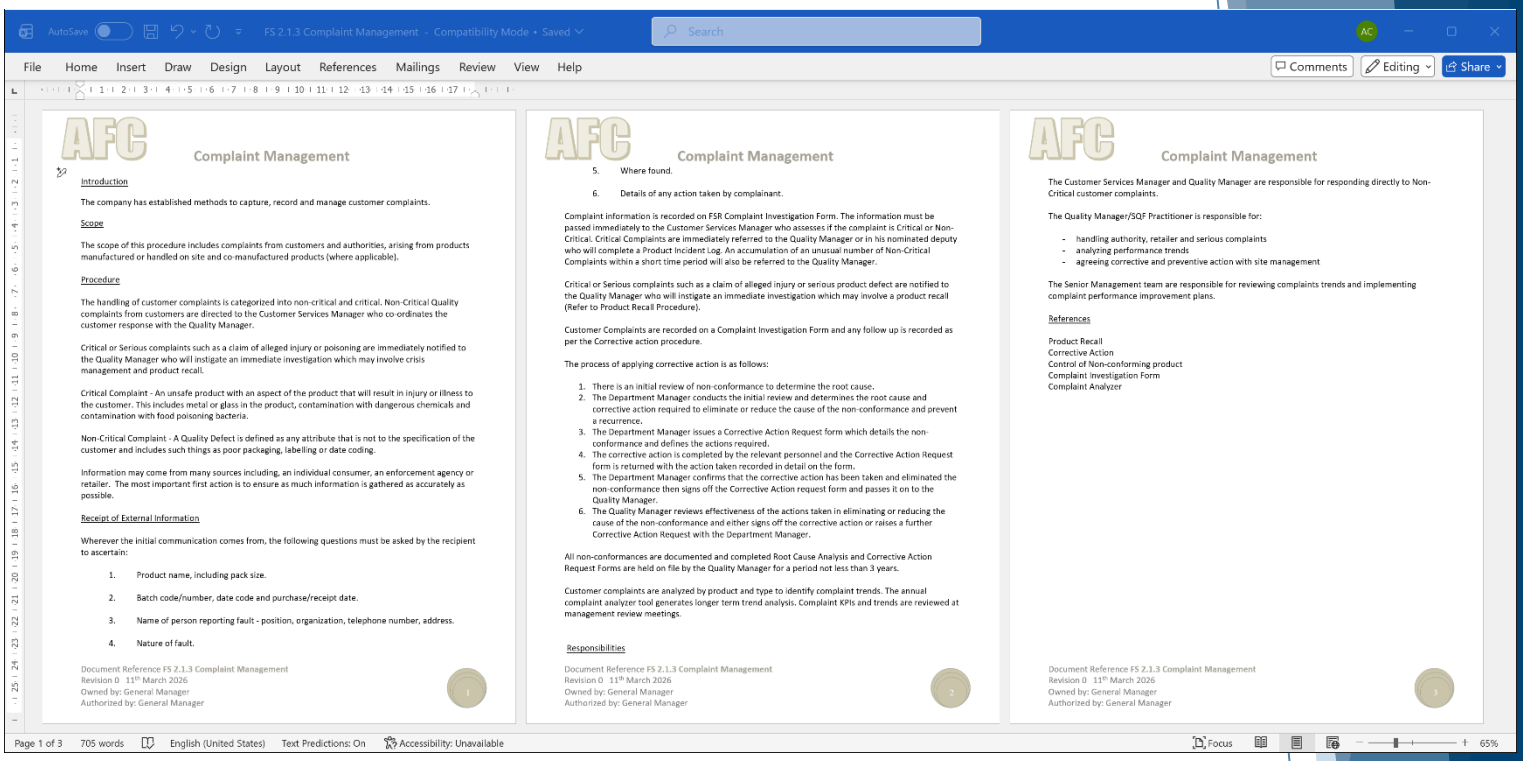
Food Fraud Assessment & Mitigation Plan Summary Instructions

Open Excel file FS 2.7.2A Food Fraud Assessment Template

This is the main Food Fraud Assessment Worksheet

To supplement FS 2.1.3 Complaint Management Procedure, there is a Complaint Analyzer with Instruction and Guidance on Reducing Complaint levels



AFC Complaint Management

Introduction

The company has established methods to capture, record and manage customer complaints.

Scope

The scope of this procedure includes complaints from customers and authorities, arising from products manufactured or handled on site and co-manufactured products (where applicable).

Procedure

The handling of customer complaints is categorized into non-critical and critical. Non-Critical Quality complaints from customers are directed to the Customer Services Manager who co-ordinates the customer response with the Quality Manager.

Critical or Serious complaints such as a claim of alleged injury or poisoning are immediately notified to the Quality Manager who will instigate an immediate investigation which may involve crisis management and product recall.

Critical Complaint - An unsafe product with an aspect of the product that will result in injury or illness to the customer. This includes metal or glass in the product, contamination with dangerous chemicals and contamination with food poisoning bacteria.

Non-Critical Complaint - A Quality Defect is defined as any attribute that is not to the specification of the customer and includes such things as poor packaging, labelling or date coding.

Information may come from many sources including, an individual consumer, an enforcement agency or retailer. The most important first action is to ensure as much information is gathered as accurately as possible.

Receipt of External Information

Wherever the initial communication comes from, the following questions must be asked by the recipient to ascertain:

1. Product name, including pack size.
2. Batch code/number, date code and purchase/receipt date.
3. Name of person reporting fault - position, organization, telephone number, address.
4. Nature of fault.

Revision 0 11th March 2026
Owned by: General Manager
Authorized by: General Manager

AFC Complaint Management

5. Where found.
6. Details of any action taken by complainant.

Complaint information is recorded on FSR Complaint Investigation Form. The information must be passed immediately to the Customer Services Manager who assesses if the complaint is Critical or Non-Critical. Critical Complaints are immediately referred to the Quality Manager or in his nominated deputy who will complete a Product Incident Log. An accumulation of an unusual number of Non-Critical Complaints within a short time period will also be referred to the Quality Manager.

Critical or Serious complaints such as a claim of alleged injury or serious product defect are notified to the Quality Manager who will instigate an immediate investigation which may involve a product recall (Refer to Product Recall Procedure).

Customer Complaints are recorded on a Complaint Investigation Form and any follow up is recorded as per the Corrective action procedure.

The process of applying corrective action is as follows:

1. There is an initial review of non-conformance to determine the root cause.
2. The Department Manager conducts the initial review and determines the root cause and corrective action required to eliminate or reduce the cause of the non-conformance and prevent a recurrence.
3. The Department Manager issues a Corrective Action Request form which details the non-conformance and defines the actions required.
4. The corrective action is completed by the relevant personnel and the Corrective Action Request form is returned with the action taken recorded in detail on the form.
5. The Department Manager confirms that the corrective action has been taken and eliminated the non-conformance then signs off the Corrective Action request form and passes it on to the Quality Manager.
6. The Quality Manager reviews effectiveness of the actions taken in eliminating or reducing the cause of the non-conformance and either signs off the corrective action or raises a further Corrective Action Request with the Department Manager.

All non-conformances are documented and completed Root Cause Analysis and Corrective Action Request Forms are held on file by the Quality Manager for a period not less than 3 years.

Customer complaints are analyzed by product and type to identify complaint trends. The annual complaint analyzer tool generates longer term trend analysis. Complaint KPIs and trends are reviewed at management review meetings.

Responsibilities

Document Reference FS 2.1.3 Complaint Management
Revision 0 11th March 2026
Owned by: General Manager
Authorized by: General Manager

AFC Complaint Management

The Customer Services Manager and Quality Manager are responsible for responding directly to Non-Critical customer complaints.

The Quality Manager/SQF Practitioner is responsible for:

- handling authority, retailer and serious complaints
- analyzing performance trends
- agreeing corrective and preventive action with site management

The Senior Management team are responsible for reviewing complaints trends and implementing complaint performance improvement plans.

Senior Management FSMS Implementation Meeting

Date/Time

Venue

Agenda

1. Formulating a checklist of Customer, Regulatory, Statutory and other relevant Food Safety requirements
2. Decide which Food Safety requirements the company should address and develop relevant policies.
3. Based on the Food Safety Policy Management Policies establish Food Safety Objectives
4. Define the scope and boundaries of the FSMS
5. Plan the establishment of the FSMS using the project planner
6. Provide adequate support to establish the FSMS
7. Ensure there is adequate infrastructure and work environment
8. Allocate responsibility and authority
9. Assess, plan and establish appropriate internal and external communication (including the food chain) channels
10. Plan to lead and support a food safety culture within the site
